NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Tuesday, October 24, 2023 at the approximate time of 4:15pm to 4:20pm local time, I was involved in a gear up landing at the Champaign Willard Airport located in Savoy, IL. Also on board the aircraft was multi-engine student, Peter Gallagher.

We had just returned to the airport from the West practice area and had requested a practice RNAV approach to Runway 22. We were given vectors onto the approach course for RNAV RWY 22. Peter was under the hood. We were given reports of multiple aircraft landing and/or departing Runway 22 prior to our arrival. Tower cleared us to land Runway 22 following a departure aircraft ahead of us. We were also given additional traffic in the pattern to watch for.

At the FAF, ZUPKE for RNAV RWY 22, I failed Peter's left engine to simulate an engine failure. Peter ran his memory items for engine failure. Peter elected not to "feather the prop" inside the FAF and continued the approach. At 150 feet above DA, I called the runway in sight for Peter. Peter lifted his hood and proceeded with the visual landing. Peter dropped below glideslope and was instructed to "fly the needles" all the way to the runway regardless of having the runway insight. Peter made the necessary power changes to correct his course and glideslope indications. Peter entered the flare when a loud squeal sound was heard. A few seconds later we realized we had made a gear up landing. Peter controlled the aircraft to its stop on the runway.

I immediately secured the engines by pulling the mixtures to idle cutoff, (I can't recall if I pulled the prop levers back), and the throttles to idle. I called for fuel pumps to be shut off, magnetos shutoff, and all electrical switches except for the radio so we could continue to monitor tower for instructions. Fire rescue arrived at the scene about the same time we verified the engines were secure. I checked the right side of aircraft for any signs of leakage and Peter checked the left side for any leakages. No leakages were found and determined it would be safe to open the main cabin door. We shut off the radios and battery master switches to complete the engine securing process and then opened the door.

Standing at the door was an airport representative to ask if we needed any medical attention. No injuries were detected/reported by either pilot and were given permission to exit the aircraft. Peter and I gathered our personal belongings and the aircraft binder then exited the airplane.
