NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On October 24th, 2023 I was involved in a gear up landing at KCMI in Savoy, IL. My instructor John, and I were headed back from the practice area in a piper seminole to attempt an RNAV back at KCMI. I put on a hood to allow for simulated instrument conditions and we got a clearance to attempt the RNAV RWY 22 at KCMI.

After receiving vectors for the final approach course I got aligned with the runway and was inbound to the FAF of ZUPKE. As we approached the FAF I was going through my descent checklist which included gear extension. I deferred putting it down at that moment because I had practiced putting it down at the FAF which was still a few miles away.

As we reached the FAF my instructor, John, simulated a left engine failure by pulling the left throttle to Idle. I immediately focused on flying the aircraft and getting it under control. I had decided not to feather the engine and continue the approach as I had been previously instructed to do. I was having a slightly hard time controlling the aircraft but not enough to execute a missed approach with a single engine. I was completely focused on aircraft control at that point. As we reached our DA John told me I had visual of the runway which allowed me to complete the approach to a landing. I was below glideslope at this point and was instructed to "fly the needles" down to the runway. As we approached the runway I entered my landing flare and heard a screech. I let the aircraft settle on the runway and we touched down rather smoothly. The aircraft slid down the runway a few hundred feet before coming to a stop.

At this point John began to secure the engines and we checked both sides for any leaks. We saw nothing that could be potentially harmful so we decided to exit the aircraft. A fire truck and some other personnel were on the scene shortly after to check on us and bring us back to our school. Neither of us experienced any injuries and the aircraft appeared to be in pretty good shape considering what happened.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

The aircraft was inspected by maintenance a few days after the incident. At the time of landing the gear handle was down but there was speculation one of us had put it down after we touched down. Neither of us remember if we heard a gear warning horn during the approach and we are not sure if the gear switch was touched after landing. The report from maintenance is that the gear was working properly however the gear warning horn was not sounding when manifold pressure dropped below 14". It was sounding when flaps were extended but on our approach flaps were not used. During the approach neither John nor I called out three green on the landing gear lights. I am currently waiting to hear the final report.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
