NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

During a repositioning flight from LEX to JAX I initially experienced an erratic/low fuel pressure with the right engine. This occurred about 30 minutes into the flight. I was in good VMC conditions so I cancelled IFR and descended to 5500 from 7000 (I had reduced power on the right engine to try and stabilize pressure and fuel flow) fuel boost pump was selected on. Upon reaching 5500 ft fuel pressure was back to normal and engine was producing full power. This condition lasted for another 15-20 minutes when the same symptoms returned. I reduced power and repeated the previous steps this time leaving the boost pump on descended to 3500 ft again power and fuel pressure were restored. Again this condition lasted for another 15-20 mins. At this point I was about 15 miles from JAX and right engine was not responsive to my attempts to correct low fuel pressure. I was setting up to shut the right engine down and secure it as it was surging and only producing partial power. I monitored the right engine for a few minutes in this partial power condition before taking action, fuel pressure did not stabilize. Shortly after this period my left engine also lost fuel pressure. This left me with both engines now only producing partial power 12-15" map less than 10 psi fuel pressure. Knowing this power would not sustain flight both engines were feathered and an emergency landing was performed in a field less than 1 mile with and free of obstacles

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

A precautionary landing would have been an option to prevent the outcome of this flight. If at any time some sort of fuel contamination would have been suspected

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)
