Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft encountered a collapsed nose gear, prop strike to taxiway sign, skin damage to upper and lower cowling, skin damage to right wing tip. Unsure of more detailed damage due to the aircraft not being inspected by A/P yet.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The accident flight was a return flight home from picking up my daughter staying with family. The originating flight went without issue from KLBB to KBGD. Departure was approximately 7:50am and arrival at 9:10am. Prior to departing KBGD, fuel was purchased. I am unsure of amount purchased, but all 4 tanks were filled for a max of 84 gallons. Prior to departure, weather was obtained at the departing airport and the arrival airport via ForeFlight (wind conditions at KLBB were approximately 220 @ 5 kts). Takeoff from KBGD was approximately 10 am, and went without issue, as well as cruise. When being transferred from Ft. Worth center to Lubbock approach, I obtained the local ATIS. Winds at that time were 220 @ 12 kts. As I neared the Lubbock airspace, I was instructed by approach to begin vectoring for sequence. I was told to fly 150. Then, a few minutes later, I was instructed to fly 170. A few minutes later, I was cleared to land straight in to Runway 26, winds 220 18 kts gusting 22 kts by the tower. I flew my final approach approximately 3-5 mph faster than normal to account for the gusting winds. It was requiring about 1/2 left aileron and 1/2 right rudder to maintain centerline. Short final went without issue. I was able to maintain centerline for the main landing gear to touch down, but just prior to the nosewheel touching, I felt a strong gust that pulled the nose of the aircraft into the wind. This maintained my momentum down the runway, while the nose of the aircraft was pointing 40 degrees to the left. As the nosewheel touched down, I began to reapply right rudder in attempt to regain centerline, however due to the torque now placed on the aircraft, I was not able to do so before the aircraft exited the runway. The torque was so great that the right wing tip dipped and dug across the ground. The wind spun me around nearly 180 degrees from start to finish. We did not exit the runway at a high rate of speed. As soon as we left the runway, we hit a taxiway sign with the prop. At that point, the engine quit, and the sign collapsed the nose gear. We immediately went nose down and forward momentum stopped. Upon coming to a stop, I shut everything off including mags, fuel, and master. I unlatched the door and we exited the aircraft without any injury. Emergency services arrived shortly after.
