Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Flew to Air Impressions in one of our aircraft to pick up N146TJ from a pre buy inspection. We have a relatively long history with the aircraft over the last 2 years when we managed it for the owners. Personally have around 150-175 hours flying this airplane. Owner took aircraft off management 6 months or so back and was in the process of selling it to my new management clients that were bringing it back to us.

Plane went through a deep maintenance cycle 9 or so months back. Upon leaving our management, the previous management person took the plane back and had told me about the right engine losing the turbocharger and making an emergency landing. Fast forward, that "issue" was fixed and the aircraft was dropped off at Air Impressions for a pre-buy inspection.

Inspection was pretty standard, no mechanical issues noted and we were advised N146TJ was ready for pick up.

Arrived at Air Impressions KACT around 1130. Went through the logbooks, spoke with the lead mechanics and conducted a preflight per standard.

Ferry aircraft departed in front of N146TJ, I followed on an IFR flight plan to 5C1 Boerne Stage Airfield 12,000 ft, ACT-Little-Direct 5C1. Runup, systems check all normal. Take off and climb per the book, 35" manifold and 2200 RPM. Once past 2500 feet engaged auto pilot and set climb speed at 150 kts on the autopilot. Passing 5,000 feet brought the mixtures back to book numbers at 30 gal per hour per side. Normal climb, no vibrations, good temps, no issues. Upon reaching 11,000ft with the One Thousand to Go voice aural, continued to climb up through 11,500. That is when the right engine let loose (surmised after analysis, the prop governor failed) and the rpm ran immediately to 4,500 RPM. Right engine audibly screaming due to the rpm, I pulled the right prop back with no change. Then I pulled the mixture back to near cutoff reducing the rpm to 2000. Right engine kept running and I commenced a turn back towards KACT with the thought process and experience that the 421 will at least hold altitude or climb at 200-300 FPM. Did not immediately declare an emergency with Gray Approach as I was assessing the situation other than turning back to KACT. Airspeed started to decay and the aircraft was descending at 1000-1200 fpm just to hold airspeed. Out of the turn I pushed the left engine to the firewall, full throttle, full prop, full mixture while trying to milk the right engine to produce at least neutral thrust vice negative. Declared an emergency with the controllers. 25 miles from KACT and 20ish from McGregor, I opted to push for McGregor field. Right engine was still spinning, though not making any power. Any prop, mixture or throttle was met with massive vibrations, cylinders missing and only Cylinder temp indications were from #1. Committed to McGregor, left engine firewalled, I continued to descent at 300-500 FPM with decreasing airspeed. Figuring that lower altitude may produce more power(thicker air) I kept pressing forward for McGregor and started looking for a field as a back up. Passing 1,500 4 miles short of McGregor KPWG I knew I was going to make an off field landing. Teetering on the stall horn, passing through 1200 and descending I turned 90* left into the still functioning engine, milked the last of the airspeed to get over the power lines and descended into the harvested corn field. 10 feet off the ground I shut boost pumps, throttles, props and mixtures off and flared into a full stall hitting the ground with the tail and strakes first for minimal forward energy. I had previously tightened my shoulder strap and lap belts knowing this would be a rough ride. Upon ground impact, I kept the yoke full after until the deceleration caused me to let go. Aircraft stopped in 100 feet, I cut off the mags, gens, battery and fuel switches and exited the aircraft to assess the situation.

Off Duty Fireman was first on scene, no smoke, no fire, all fuel tanks intact. Returned to the cabin to turn off the ELT after the first phone call with Waco approach on my mobile. Waited for the sheriffs, DPS and had a few phone calls with yourself and other FAA personnel.

I have flown both Military Fighter and GA aircraft for the last 40 years. Today was an eye opener that sometimes the other engine is only enough to get you to the scene of the crash. Thankful to be able to walk away with no injuries, no property damage and an airplane that can be flyable again depending on if it is within economical repair.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Right Prop governor not failing.
