DAMAGE TO AIRCRAFT AND OTHER PROPERTY		
Aircraft Damage ☐ None ☒ Substantial ☐ Minor ☐ Destroyed ☐ ☐ Unknown	Aircraft Fire ☒ None ☐ Both Ground and In-Flight ☐ In-Flight ☐ Fire at Unknown Time ☐ On-Ground ☐ Unknown	Aircraft Explosion ☒ None ☐ Both Ground and In-Flight ☐ In-Flight ☐ Explosion at Unknown Time ☐ On-Ground ☐ Unknown
Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Wing struck ground, prop strike...left wing slid through soft ground as we slowed to a stop.		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>		
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.		
9am the next morning Checked weather, VMC all day with winds out of the south, shifting to the west then back to the south later in the evening. Clouds were at 9000 feet so I chose to fly VFR at 4500		
Drove to Westheimer to meet 4 pax (my boss) ss' wife) sat in the copilot seat) ' daughter)		
Weight and Balance was completed and we took off with about 60 gal of fuel (~2hrs of fuel for 40min trip) I was current for AMEL day/night/IFR and had my commercial checkride last month 11 Nov 2023 My Class 2 medical expires in May		
Walk around, no discrepancies noted		
Took off runway 18 inbound to PNC via west of KTIK then direct to PNC nothing significant to report en route. We maintained flight following for the entire flight by Oke City Departure and KC Center.		
Checked wx at PNC at 50nm and 15nm winds were (230/12 gust 18 written on ipad Foreflight and in E6B crosswind calc) expected a crosswind out of the right (west)		
After checking wx (about 12nm out) pulled 1st notch of flaps then gear down after dropping below 129 KIAS. Saw 3 green on the landing gear lights before entering downwind.		
On downwind after abeam the threshold completed my GUMPS before landing checklist out loud to demonstrate it for my pax, had 3 green and 1 notch of flaps. The winds were gusty so I decided to complete the landing with only 1 notch and turned base.		
We were in a crab to the right for the approach We were over the threshold at 85 Power idle Touchdown at 70-73 Landed right wheel first and corrected crab with left rudder.		
Once all three wheels came down we slowed but I felt a pull to the left. I made a right rudder/nose wheel correction but it wasn't enough. I feared over correcting so I gently applied more rudder then we jerked more left and exited the runway. Upon further thought, the nose wheel might have stayed left causing the continued turn but I cannot confirm.		
The left main completely collapsed either just before or directly after exiting the runway surface and we swung hard left until settling 40-50yds east of the runway. While still in motion I cut the mixtures but didn't turn off the fuel until after we stopped.		
The ground was soft due to recent rain so I cannot confirm, but believe the gear collapsed once we departed the runway... digging into the soft ground then hitting taxiway C on the east side of the runway.		
The departure from the runway was slow due to braking beforehand but fear of locking up the brakes or blowing tires kept me from trying to come to a complete abrupt stop.		

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

At the moment I am not completely sure. I wish I would have attempted an abrupt right rudder push and aggressive braking, but I'm not sure that would've ended in a better situation.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No*(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)*

Won't know until after the airplane is inspected but I feel like the nose wheel steering was off.
