

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Washington State: MO
 ZIP: 63090 Country: USA
 Latitude: 090-59-37W Longitude: 38-35-15W
(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 12/30/2023 Local Time: 14:15
mm/dd/yyyy Time Zone: CST

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: 678MJ

Manufacturer: Bellanca

Model: Super Viking 17-30 A

Serial Number: 79-30941

Year of Manufacture: 1979

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☒ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 3325 lbs

Weight at Time of Accident/Incident: 2831 lbs

Number of Seats: 4 Flight Crew Seats: 1

Cabin Crew Seats: _____ Passenger Seats: 3

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☐ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight
- ☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☒ Normal
- ☐ Aerobatic
- ☐ Balloon
- ☐ Commuter
- ☐ Transport
- ☐ Utility

Special

- ☐ Restricted
- ☐ Limited
- ☐ Provisional
- ☐ Special Flight
- ☐ Experimental
- ☐ Special Light-Sport
- ☐ Experimental Light-Sport

☐ Certificate of Authorization or Waiver (COA)
☒ None ☐ Unknown

Landing Gear

(Check all that apply)

☒ Retractable

☒ Tricycle

☐ Tailwheel

☐ Amphibian

☐ High Skid

☐ Emergency Float

☐ Skid

☐ Float

☐ Ski

☐ Hull

☐ Ski/Wheel

☐ Other Launch/Recovery System

☐ None

☐ Unknown

Engine Type (Select one)

- ☒ Reciprocating
- ☐ Turbo Shaft
- ☐ Turbo Prop
- ☐ Turbo Jet
- ☐ Turbo Fan
- ☐ Electric
- ☐ Liquid Rocket
- ☐ Solid Rocket
- ☐ Hybrid Rocket
- ☐ None
- ☐ Unknown

Fuel System Type (Reciprocating)

☐ Carburetor ☒ Fuel-Injected

Engine	Engine Manufacturer	Engine Model/Series	Manufacturer's Serial Number	Date of Mfg. <i>mm/dd/yyyy</i>	Rated Power ☒ Horsepower or ☐ lbs of Thrust	Total Time (hours)	Time Since: Inspection (hours)	Overhaul (hours)
Eng. 1	Continental	IO-550-F	1031332	10/8/2015	300	159.7	10	159.7
Eng. 2								
Eng. 3								
Eng. 4								

Last Inspection Type

- ☐ 100-Hour
- ☐ AAIP
- ☒ Annual
- ☐ Continuous Airworthiness
- ☐ Conditional Inspection
- ☐ Unknown

Date Last Inspection: 09/03/2023
mm/dd/yyyy

Airframe Total Time: 2150.7 hrs
 hours measured at *(Select one)*
☐ Last Inspection ☐ Time of Accident/Incident

Type of Maintenance Program (Select one)

- ☒ Annual
- ☐ Conditional (Amateur-built only)
- ☐ Manufacturer's Inspection Program
- ☐ Other Approved Inspection Program (AAIP)
- ☐ Continuous Airworthiness
- ☐ Other, specify: _____

Description of Fire Extinguishing System

- ☒ None
- ☐ Specify: _____

Propeller 1

- ☐ Fixed Pitch
- ☒ Controllable Pitch
- ☐ Ground Adjustable

Manufacturer: McCaulay

Model: D3A34C 401-C

Propeller 2

- ☐ Fixed Pitch
- ☐ Controllable Pitch
- ☐ Ground Adjustable

Manufacturer: _____

Model: _____

ELT Installed: ☒ Yes ☐ No

If Yes:

ELT Manufacturer: Narco Aviaonics Merle

Model or Part No.: 60058

TSO No.: ☐ C91 (121.5 MHz) ☐ C91a (121.5 MHz)
☐ C126 (406 MHz)

Was ELT still mounted in aircraft? ☒ Yes ☐ No

Was ELT still connected to antenna? ☒ Yes ☐ No

Did ELT Activate? ☒ Yes ☐ No

If activated:

Did ELT Aid in Locating Aircraft: ☐ Yes ☒ No

If not activated:

- Indicate Reason:
- ☐ Impact Damage
 - ☐ Fire Damage
 - ☐ Battery Expired/Damaged
 - ☐ Unknown

Additional Equipment (Check all that apply)

- ☒ ADS-B
- ☐ Airframe Parachute
- ☐ Angle of Attack Indicator
- ☒ Autopilot
- ☐ Data Recorder
- ☐ Electronic Flight Bag or Handheld Device
- ☐ Electronic Multifunction Display
- ☐ Electronic Primary Flight Display
- ☐ Handheld GPS
- ☐ Heads Up Display
- ☐ Onboard Weather
- ☐ Satellite Tracking Device
- ☒ Stall Warning System
- ☐ Video Recording Device
- ☐ Other, Specify: _____

Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Cowl, landing gear, Prop, left wing, fuselage, Epinage			
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>			
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.			
The story starts on 10 December 2023, at Washington Regional Airport, on a sunny afternoon with my son, Clifford, who was a Marine Harrier and Citation pilot. He was also a trainee and instructor in several other aircraft, as well as being the safety officer of two squadrons. He is in the process of retiring from the military, is a civilian CFII, and is current on Citations. Before flying on December 10, Clifford and I went through the normal pre-flight to include fuel drain and check and oil check. We also had my grandson, Nathan House, in the Viking with us. We then taxied, did a run up and 33 runway take off normal at 90 MPH by checklist. At about 500 feet AGL I lowered the nose to accelerate to 120 MPH and entered my left cross wind turn. As I turned, I felt and heard a loss of power, but could see that the prop kept turning. I tried to maintain altitude while slowing down to 90 MPH and then I glided as far as possible to the runway. I landed in the grass about 100 yards short of the runway (which I knew was smooth ground) then entering the 15 runway. Clifford was working the radio and announced our emergency landing. After entering the runway, the prop was still turning but stopped as I turned back into the grass to clear the runway. We sat there for a few minutes discussing what had just happened and what to do next. Finally, I said, "let's try to start it" and after about 5 tries, it fired! So, we taxied back to the tarmac and deplaned to a small crowd. We thoroughly checked out the airplane but could not detect any damage. I dropped off Clifford and Nathan. The Viking started on the first try, so I did some run ups, taxied out to the 33 runway did some more run ups, and then maybe 5 or 6 high speed runs down the runway without lifting off. All appeared to be well, so I put the Viking away, called our aircraft mechanic, explained what had happened, and asked him to check it out. After he did, he said he had found that the fire cone was missing from the muffler, similar as to what he had seen on another aircraft. On that aircraft, the fire cone had come lose and blocked the stack, killing the engine. He thought that mine had probably fallen out in the grass. He thought it would be safe to fly after inspecting the engine and running it. On 30 December 2023, at about 1:45 p.m., I went to the Washington Regional Airport with my wife and two daughters. Clifford and some of his children were also coming to meet us. As the most experienced Viking pilot, I wanted to test fly it before anyone else got in. My daughter, Katie wanted to go with me, but I said "No, I have to go alone in case anything happens." Incidentally, Katie, has been flying with me since she was a month old, and so was on the tarmac taking pictures of the taxing and take-off while she waited for me to come back and pick her up after I shot a landing. Pre-flight and start up was normal with the engine starting on first try. I ran the engine up and down a few times and let it run for a few minutes before taxing. It all appeared to be normal when I turned onto the taxiway at 2:06 p.m. I made a lot of turns to take longer to get to 33. I did my pre-take off check list and all normal so I took off half flaps. At lift off (2:13 p.m.), I lowered the nose until I obtained 90 MPH, gear up, throttle back to 2500, prop back to 25", flaps up. At this point, I was at about 400' AGL, which is where I usually lower the nose and hit 120 MPH and turn cross wind, however this time I wanted to keep a tight pattern so I lowered the nose and initiated my left turn, at which point I realized I didn't have any power and was losing altitude. By this time, I was trying to retain altitude and loose air speed. In the 180-degree turn, I could see a copes of trees I could have hit, so I tightened my turn and must have stalled and started to enter a nose down spin. A thought flashed through my mind (as it had 50 + years ago in Vietnam when an NVA .51 cal machine gun opened up on me) "This isn't good." With years of aerobatic and spin training my body and instinct took over: "Right rudder stick forward nose up." Only the nose wouldn't come up. So I took my right hand off the throttle, put it onto the stick, and pulled back very hard, which was effective, because then I saw the sky. I kept the stick forward in order to glide but not stall, and I kept the nose up so as not to cartwheel on impact. My seat belt and shoulder strap were tight, and yet I was thrown up into the sun visor and ceiling where there is still a blood spot. I came to a sudden stop at 2:16 p.m. Based on the ground condition and wreckage pattern, I think I traveled 60-75 feet on the ground before coming to a stop. While my left hand was shutting down the mags, masters, and ignition, my right hand was unbuckling the seat belt then lunging toward the door latch as my left hand tore off my headset. I opened the door and rolled onto and off the wing to get further away in case the plane exploded into flames. It didn't. I looked at my plane, by this time I had walked to the wing, looked back and thought: "Any landing you can walk away from is a good landing, but I doubt I'll be flying this one tomorrow." By this time, people were arriving and I realized my lower back hurt. Back by the door I found my right hearing aid, but my left has yet to be found. Katie arrived and was glad to see me sitting on the wing and talking. She had seen the whole thing and heard the loud thud. Paramedics arrived quickly, and they put me into a neck brace and asked me if I wanted to go to the hospital. I said no and they looked at me like I was nuts. After a bit of persuasion, I relented and agreed. By this time my wife and other daughter had arrived. I was off to the hospital where the CT scan showed compression fractures of my L-1 and L-2 vertebrae. End of story.			

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I earned my pilot's license in 1969, and all of my years of aerobatic and spin training paid off. My initial turn was like a flat chandelle, except that I was trying to maintain rather than gain altitude. Both during my check flights and on my own, I always practice power-on and power-off stalls. I also practice stalls in a turn and slow flight with and without an instructor in the plane. In addition, I routinely practice take-offs and landings, short-field landings, and engine-out landings. However, in all of my 54 years of instruction, check rides, and individual practice, I have never been instructed to practice power-off stalls recovery with no power, or had an instructor tell me to "turn on the boost pump." So while quite a bit of my training kicked in automatically, that's the one thing I didn't try.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Still be determined with engine tear down by NSTA. Suspect fuel pump failure.
