NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

During cruise flight en-route to destination KIYA at 11,000 MSL and in the vicinity of De Ridder, LA, scattered convective activity persisted along our cleared route of flight. In an effort to deviate away from a visually acquired build up ahead, I requested a radar vector away from ground radar returns. ZHU Center issued a heading of 075 to avoid weather which was consistent with the visual picture we had while in VMC. Within a few minutes on the vector, the aircraft re-entered IMC and within approximately 1-2 minutes experienced a strong updraft followed by heavy rain and then hail which lasted for 30-60 seconds. Severe turbulence made altitude control not possible and I obtained clearance from ZHU for any altitude. Upon exiting the hail encounter, I requested the field conditions at the nearest airports and Leesville was suggested. Due to local knowledge and lack of emergency services however, a diversion to the nearest suitable field with an ILS and CFR resulted in selection and uneventful approach and landing to Chenault Field KCWF in Lake Charles, LA.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

This aircraft was not equipped with airborne weather radar. This could have been a primary tool that might have depicted the threat of hail or heavy precipitation on the vectored heading and in IMC.
