Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

6-8 inch point of impact paint crack.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The flight was to be local (25mi radius) taking off and returning to the Soaring Club of Houston Glider Port (Airport Identifier 89TA). Winds were out of the South (170-190 degrees) at about 15 miles per hour. Cloud base was approximately 3700-4000 MSL. There was thermal activity present. Visibility was good - 10+ miles. Terrain within 100 miles of 89TA is basically flat.

The incident occurred approximately 1 hour into the flight about 4-5 miles from the airport - maneuvering and not entering the traffic pattern. I was on a southerly course and started a turn to the right, reacting to rising air. I did not see the other glider involved in the incident until I heard contact. The other glider was below me and I believe also making a right turn. I believe my right wing came in contact with his upturned left wing. At NO time did I see the other glider until we contacted.

After contact we were in radio contact with each other. I went through an evaluation of the damage my glider had received - visual and response to controls. The glider appeared to fly as if the incident had not occurred. I returned to the airport (89TA) and landed normally.

My glider has a transponder but does not have traffic avoidance notification. There is a glider specific traffic avoidance system "FLARM." My glider does not have FLARM installed. The FLARM system can receive transponder signals. I do not know if the other glider had such a system.

RECOMMENDATION (How could this accident/incident have been prevented?)

Use this space if additional space is needed for any answers.

Kevin Douglass has opted out of releasing address information.

The Discus 2cT has a sustainer engine - sustains flight but cannot self-launch. The engine was stowed throughout the whole flight and was never used. Questions pertaining to the engine were considered as none.
