Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Statement from the pilot of the incident aircraft.

I started out by pre-flightting & tracking the winds from early morning before my flight at 10:00am, to 1:00pm(1300) takeoff, to 3:00pm (1500). I left around 13:30 from runway 18 and the wind was 12kts. Halfway to Clarion I noticed there was a bit of turbulence. Once I dropped down to 2500feet. I checked the windsat Clarion (KCAV) which were 17-23 kts at 240 degrees. I saw other planes on the way near Webster City landing and taking off. Once I got to Clarion (KCAV) the winds were 23kts, 250-270 degrees. I rechecked the airport and the winds increased out of 270 degrees and were gusting 30-35kts. I flew around the airport once to get a feel for the winds and line up. I flew around in a circle to feel how downwind was and did a base but the winds pushed me so far off course. I did a larger loop and corrected for crosswind on downwind to be pushed over the airport and went out farther so I did final on the edge of Clarion a mile out lined up on final. I was crabbed into the wind perfectly and was making sure I was within airspeed and flap limit while slowly descending. I was crabbed into the wind and straight on to the runway. I felt gusts of wind hit the plane and push me right but I held steady and made it down to the runway safely. I was in control all the way to the runway and I was ready with the rudder to straighten out the nose as I was so far crabbed into the wind. I had flaps carefully put in on base and final until I was lined up; I used 20 degrees of flaps and carefully added 30 degrees of flaps around 500 feet out. Once I knew the runway was made about 100 feet out I used 40 degrees of flaps and flared down to the runway. I slowed to 60 kts and touched my left back wheel first. I used the right rudder to line the nose of the plane up with the centerline while holding the wind correction in and the wheel touched down. The moment the first left wheel touched I used the right rudder slightly to get the rest of the plane straightened out and touched the right back wheel. The nose wheel was still hovering as it wasn't touched down yet. The first bounce was small with the nose up and still in flare as I tried to gently land the plane down. Next what happened was within seconds of reacting. I felt a gust of wind push the plane suddenly to the right off centerline by 6 to 10 feet. I steered to the left slightly and was straight again and put carb heat and power back in to try and go-around as I was still trying to get back to centerline. The first bounce I did a go-around procedure in motion but the second bounce caused the plane to be lifted and veered to the right again this time in the grass, I pulled power instantly and tried to steer back to the runway. I kept being lifted and pushed to the right and could not turn the aircraft to the left at all. I was jostled by the 2nd bounce making my feet unable to hit the rudder pedals in time to steer to the left. I was going around 50 kts or less by the time the aircraft was lifted veered to the right into the field and I pulled the yoke back to keep the nose from crashing. I bounced one time in the field and the nose went into the ground and bounced one more before flipping over.

**RECOMMENDATION (How could this accident/incident have been prevented?)**

Operator/Owner Safety Recommendation

Be aware and have better situational awareness of wind conditions at the destination.

Know what the winds are at the departure and arrival airports

Get updated weather at the destination

Make an educated decision on whether to proceed considering the conditions

The Chief Instructor will conduct remedial training with the pilot.
