Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Typical ground loop damage to Right Wing and Aileron, Right Horizontal Stabilizer and Right Elevator. Damage included wing tip, upper and lower wing skin and leading edge likely damage to spar. Damage to horizontal stabilizer, spar, upper and lower skin, damage to elevator, deformation

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Winds across the route of flight had been east/north east and gusting throughout the day. Upon initial arrival at KESF the visual inspection of the surface on runway 14/32 showed the surface to be very broken and appeared quite rough. The decision was made to use runway 09/27. The entry to the traffic pattern at KESF was a normal left down wind, base and final approach with winds reported at 010/14/G24. The approach was a normal cross wind approach with no difficulty as was the touchdown using normal cross wind control inputs (left aileron and right rudder). Touchdown was normal right on centerline as was the initial portion of the roll-out. Approximately half-way through the roll out I encountered an extremely strong gust from the left pushing the tail of the aircraft to the right. Full left aileron and full right rudder inputs were inadequate to counter the effects of the gust resulting in the aircraft starting an uncontrollable turn toward the left side of the runway resulting in a ground loop right at the left edge of the runway. There was no property damage save for a bit of scuffed turf at the edge of the runway. No injuries were incurred by either the pilot or passenger.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

In hindsight the best plan of action would have been to seek out a different airfield where the runway alignment better suited the current wind conditions.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

I did not record the density altitude or sky conditions when taking notes from AWOS therefore I was unable to complete that portion of the form.

I do not have access to the aircraft, therefore the serial number plate on the engine which includes date of mfg. So that information is also missing.

I took a photo of the sheet on my kneepad to capture the wind information I had copied from the AWOS prior to leaving the aircraft. The photo did not cover the portion of the page where I recorded the altimeter setting so that information is also missing.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
