☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

left wing broken at half way point. right aileron damaged. landing gear collapsed. wood propeller broken

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

A series of stop and go landing was planned. Wind was changing directions significantly, occasionally indicating a 90 degree left crosswind. Occasionally the wind sock went straight out. Generally however the wind was from about 160 at about 13 mph..

Control check, and brake check were normal. Taxi and engine run up was normal. Departure on runway 18 was announced with the intention of staying in the pattern. No other traffic was observed or reported.

The takeoff roll was normal and the tail was raised as per normal, the airplane was slightly left of centerline. At lift off and about 3 feet off the ground the airplane began to move laterally to the left. Normal right rudder and right aileron seemed to have no effect. A stronger input was then initiated and the left wing came up to about a 30 degree angle rather abruptly. The airplane crossed to the right side of the runway very quickly. An attempt to level the wings felt sluggish and a perceptible loss of lift was experienced as if there was a sudden tail wind. A descent from 3-4 feet agl was experienced and could not be prevented. The airplane landed firmly the grass off the right side of the runway. An attempt to stop proved futile and the airplane went into a large drainage ditch approximately 50 feet wide and 20 feet deep. The airplane came to a stop against the far side (west side) of the ditch headed north. The mags and fuel were shut off and the pilot and passenger exited unharmed.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I really have no suggestion as to how to prevent such an incident, but perhaps more airspeed before liftoff would have given me more control.

The swirling wind was a major contributor to the loss of control.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

The left wing as broken at the midway point. The landing gear was collapsed. The tailwheel mount was bent to the right. The wood propeller was broken. A local wrecker was called to attach a cable and tow the airplane out of the ditch and get it off the runway area.. The airplane is a hanger at 50R.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
