

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Falcon State: Co

ZIP: 80831 Country: USA

Latitude: N 38:55:25 Longitude: W 104:34:13

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 03/12/2024 Local Time: 0915
mm/dd/yyyy

Time Zone: MDT

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N2905H

Manufacturer: Schweizer

Model: SGS 2-33A

Serial Number: 545

Year of Manufacture: 1979

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☐ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 1040 lbs

Weight at Time of Accident/Incident: 1005 lbs

Number of Seats: 2 Flight Crew Seats: 2

Cabin Crew Seats: 0 Passenger Seats: 0

Number of Engines: 0

Category of Aircraft

- ☐ Airplane
☐ Balloon
☐ Blimp/Dirigible

☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

In general, the truss frame of the fuselage was deformed with several tears in the fabric covering. Additional notes: nose cone crushed, left wing outboard 10 ft separated, tailboom bent, right horizontal stabilizer bent, canopy deformed and cracked.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The flight was intended as a part 91 instructional event using ground launch (autotow) of the glider. Operations were conducted on KFLY RWY 16, a relatively rough natural turf strip. The CFI and the tow driver (an ATP rated pilot) assessed the winds as a direct right 8-10 knot crosswind and planned for a 50 mph tow vehicle speed. The CFI would demonstrate the takeoff and the student would fly the pattern and landing, all at RWY 16, KFLY.

At approximately 0915, the tow vehicle moved into position and the student in the front seat completed the before takeoff checklist. The tow rope was attached to the CG hook. The crew signaled to the wing runner ready for launch and he relayed to the tow vehicle. The tow vehicle took up slack in the line and then accelerated for takeoff. The glider accelerated normally and lifted off at approximately 35 mph. The aircraft accelerated to 42 mph in ground effect and the CFI pulled aft stick to accelerate on the launch arc. He immediately put in slight right stick correction for runway alignment with airspeed increasing slightly. The aircraft began an uncommanded left roll. The CFI applied full right stick and the left wing continued to drop. The left wingtip hit the ground, absorbing a significant part of the vertical impact. The aircraft yawed left as the aircraft descended. As it rotated in yaw the tow rope released (as designed). The left front of the nose impacted the ground, then the fuselage came down level on the main gear. The aircraft came to rest after approximately 270 degrees of rotation, pointing southwest, about 10 feet off the northeast side of the runway. The crew checked for injuries and egressed normally.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

Don't take off with a crosswind higher than flight control response will allow. The indicated and forecasted wind was well within what previous experience has demonstrated safe. Clearly that wasn't what was experienced. In aerotow the rope pulls more along the roll axis, so it provides little fulcrum for a coupled rolling force. In this aircraft aerotow with 15 knot crosswinds have often been accomplished, though sometimes during takeoff roll a wingtip has contacted the ground (it has wingtip wheels). In ground launch with a CG hook the rope anchors the bottom of the aircraft like rolling with a center wheel on the ground; in this case anchoring the bottom effectively to the right as the wind pushed the high wings to the left. Perhaps releasing the tow rope as soon as the roll was felt, might have allowed the aircraft to remain upright, maybe. It's still a Schweizer 2-33, though, with a notoriously poor roll response history, especially at low speed, so maybe nothing could have helped once the roll started.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)**Was there Mechanical Malfunction/Failure?** ☐ Yes ☒ No*(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)***Total Time/Cycles
