Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Landing gear furrows in soft soil of aircraft property. Aircraft flipped, shearing propeller, damaging vertical, with airframe and wing creases

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Flying level in the clear at 11000 when noticed that manifold pressure starting to bleed off slowly, continuing after adding additional. Cancelled IFR and was proceeding to a precautionary landing at San Saba in the vicinity. Oil pressure quickly went to zero and in rapid descent the prop went to overspeed, and in sight of the field and lined up with runway 31, smoke began exiting the cowl. Gear was lowered but flaps kept retracted in hopes of making the field. Fuel and master off, door cracked open and seatbelt cinched, but noted airspeed approaching stall and trying to avoid a stall made a controlled forced landing in line with the runway but a 100 yards short. Recent heavy rains made the turf soft and the nose gear dug in, flipping the aircraft and shearing the propeller. I did not lose consciousness and remained unhurt, and released seatbelt and shoulder harness to be able to exit the aircraft. Noted small engine fire and was able to release the seat-mounted fire extinguisher and empty contents through air intake of cowl and suppress the fire. Response was immediate as there was just wrapping up an airport board meeting in the small FBO building. Emergency medical personnel arrived to take vitals and left after my signature authorizing such. Department of Public Safety officer arrived about an hour later to take photos and file a report. FAA contacted prior with permission to move the aircraft. A backhoe was used to flip it over and was towed to a nearby grassy area and tied down.

Destination was North Carolina for a series of meetings and visits there and in Virginia, and permission was given to leave the scene. A rental vehicle was obtained in a nearby town and I proceeded on my way. Dave Gill and his wife (new friends!) maintain a hangar on the field and in it I placed some of the items from the aircraft and they retained the maintenance logs to give to the FAA inspector arriving the next day.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

That will be determined by analysis, but with instruction not to remove the cowl, I can only surmise that I lost an oil line to the turbo or the turbo itself, starving the engine of oil. Overspeed destroyed the engine. Lucky boy here...

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

I'm exceedingly appreciative of course of not having been injured, but also of the considered and compassionate response of those that did. This is a first for me in 30+ years of flying, and will always be conscious of the privilege, responsibility, and joy of getting to leave the ground. It won't be the last time to do so, as I do know the odds of a mechanical of this nature, and hope that it's not likely again!

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
