Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft flipped over destroying wings/fuselage

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Took off from VACA Moo (TA37) at 12:45 local to fly over Red Star (71XA) airport then departed back north to back to Vaca Moo(TA37) airport. When arriving at TA37 I made a pass down the runway 18 to verify cleared runway and check low level wind shear and cross wind conditions that I had previously encountered at the same airport hours earlier. Upon arrival, the cross wind seemed lighter than earlier. I therefore chose to practice a soft field landing to the beginning of runway. I flew a standard landing pattern to runway 18 and established a stabilized approach at 1.3 Vso with full flaps on final. I established a power on nose high attitude to perform the soft field landing as slow as I could to keep sink rate minimal. As I started to flair I felt turbulence and a strong push to the left and saw a loss of 10 mph indicated airspeed. I corrected with right rudder but the low level shear caused a sudden sink and the nose wheel dug in immediately after the mains touched down, even though I held full aft elevator. The airport information reported a 50 foot width runway. I ended up touching down on side of runway in soft sand. The nose wheel and prop touch down and dug-in to sand causing me to flip over. I turned off fuel and master and exited aircraft unharmed.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Land further down the runway rather than at beginning and be more suspecting of low level wind shear in these type conditions.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)
