Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The aircraft was fueled and preflighted prior to the incident flight. We updated my knowledge of weather, airport operations, and NOTAMS, including those related to anticipated runway use. We had agreed that our flight was to be limited to takeoff and landings at the same airport prior to the student's upcoming checkride.

We felt that the runway, aircraft performance on the day, and fuel available would be adequate for safe operation. Throughout operations, we were in continual contact with ATC Ground and Tower controllers. Prior to departure, we confirmed our pre-takeoff assessment as part of our routine pre-takeoff safety briefing. The student then demonstrated a series of takeoffs and landings, simulating short field takeoff and landings and soft field landings. Our planned final takeoff was to be a simulated soft field takeoff. Prior to our takeoff clearance, we completed our pre-takeoff flow check. We were then cleared onto the runway and then for takeoff.

The Student Pilot had positive control of the aircraft. As he applied full power he maintained back elevator pressure to simulate soft field conditions. As the aircraft gained speed, it briefly lifted off. It then bounced off the runway surface. I quickly verbalized a pitch-down command. The aircraft began turning to the left while still in a nose-high attitude. I commanded pitch down, began to apply forward elevator pressure, and then stated "my controls". I then felt the aircraft turn quickly towards the right and pitch nose up. I cannot recall the exact manner in which the aircraft contacted the ground. After coming to rest, we secured the aircraft by bringing the mixture control to cut-off, turning the fuel selector to the fully off position, turning the ignition switch to the off position, and turning off electrical switches. We then rapidly exited the aircraft to mitigate the risk of delayed fire.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Positive transfer of control principles were standard, though perhaps these could be further practiced as a surprise/emergency while in otherwise safe circumstances. This may or may not help mitigate the risk of control confusion and reactive aggravated inputs in the event an emergent intervention is necessary.
