Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Significant prop-strike damage. Damage to propeller spinner. Top of vertical tail bent. Wing strut bent. Windshield shattered.

I am unaware of damage to airport property, however there were several lights in the area where the aircraft came to rest.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

My student and I taxied to the runway with the intention of departing the area to the Northwest. I had been monitoring a line of precipitation that had been moving Northeast, but it was trending East/Northeast and looked as though it would pass the airport after our departure, and would be clear of the area by the time we returned. On our taxi I continued monitoring weather radar. Due to other traffic, both arriving and departing we sat for longer than anticipated. In this time the area of precipitation intensified and changed course to more North than East/Northeast. At this point, looking out the window, ADS-B radar, and tower reports it had become heavy precipitation. I let the controller know that I wanted to return to our run-up area to wait out the rain. We were instructed to hold short of 20R due to landing traffic because we would've crossed the hold-short line if we attempted a 180 on the taxiway (E). Shortly after this the rain began. It quickly brought the visibility to the point where even if cleared by ATC to do so, I was not comfortable attempting to turn around. Since wind-socks were not visible, I verified my control deflections based on the blowing grass (the wind had only then begun to pick up). It was a very short time (30 seconds?) before we started getting wing-lift on the right side of the aircraft. This was quickly followed by the tail being lifted, scooting us left and slightly forward. My attempts at stopping the engine before the prop struck were too slow due to how quickly it occurred. The aircraft was pushed to the left side of the taxiway and was then rapidly flipped over onto its back. I secured the aircraft (mixture/fuel selector off, and asked my student to switch off the master and magnetos), and we exited through the left door. I used a hand held radio to inform ground control of our situation and that we had exited safely and were unhurt. The ARFF rescue vehicle arrived quickly and we were brought to the firehouse to see paramedics. We were cleared to leave having only bumps and bruises. We denied medical care, though my employer had me go to get checked at urgent care to be sure.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The only way that I can see that this would have been prevented would have been to either leave 10 minutes earlier or 10 minutes later. Had we been taxiing back to the runup area it is likely we would have experienced a similar situation.
