NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On May 8th 2024 at approximately 1:15pm CST I was coming in for a landing at 7T7. Winds appeared to be favoring RWY 24/06 ~~according~~ according to the Pylon data provided for 7T7. This particular airport does not report TAF or Metar data. During the landing, a strong gust of wind pushed the aircraft off centerline. Since 24/06 is relatively narrow, you must ~~be~~ be on or very close to centerline to land without landing in the grass. The gust pushed the aircraft to the right of centerline. I was at the midway point of the runway where 24/06 intersects with RWY 16/34. With little runway left, I initiated a go-around instead of trying to save the landing. Once I initiated the go-around, full power & first notch of flaps, the aircraft became uncontrollable and immediately lost lift. I was very close to the ground. The airplane stalled and made impact with the earth. It is important to note that I did not hear a stall warning horn, nor do I believe it was operable at the time of the accident. After further inspection, it was pointed out that the flap switch remained in the retract position

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

A more stabilized landing could have prevented the accident.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

I believe the flap switch for that aircraft malfunctioned & the stall horn was inoperable

Once I initiated to go around. Therefore, all of the flaps retracted at one time, which is why the airplane stalled. Being that I was so low to the ground, there was no recovery altitude for a power on stall. I assume I was less than 30ft off the ground when the accident occurred. The terrain the aircraft landed in was sand/dirt immediately ~~west~~ to the left of RWY 24/06. I believe the accident occurred because the flap switch got stuck in the retract position and I do not believe that is the normal manufactured way it is designed to operate. In my experience, once released the flap switch returns to neutral, meaning the flaps do not go up or down.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
