Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Broken gear, landing strut, rim, both wings damage, both struts, both ailerons, both flaps, fuselage frame, tail left horizontal stabilizer, interior carbon fiber, exterior covering, paint, prop strike shredded prop when contact with bobwire fence.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

I checked weather completed preflight, utilized checklist, completed run up, contacted KCOS Ground to obtain VFR departure clearance. Taxied to runway 35L and departed once KCOS tower authorized. After being handed off to approach I converted to VFR. I proceeded North approximately 25 nm to grass strip. I completed landing checklist, noted winds were 19-23 KNTS upon short final approach, I last noted that my indicated airspeed was 48 knts and there was a quartering crosswind from the North, I was landing North. I had initiated 10, then 20 degree flaps. As it appeared I had made the landing I input full flaps. At this point the plane slowed from what appeared to be wind shear and the plane sank at a higher rate of speed than I was safe. I immediately applied full power but within seconds realized I was unable to climb sufficiently and my plane was going to land on a bob-wire fence. I hit a fence pole on the left side middle of my fuselage, this turned the plane slightly left and the bulk of the impact force was taken by the right side wheel and landing gear/strut. The gear bent and wheel collapsed and the plane then the aircraft veered left and ran into the bob-wire fence which is where the additional damage occurred to the entire plane. I pulled the power and once the plane came to a stop the engine was idling and I pulled the mixture and turned the fuel and electronics to off and exited the plane.

The terrain is rolling foothills grass with strip in valley.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

What I would do to combat wind shear would be to utilize better energy management / higher speed. Additionally, I would make use of more available runway to give a higher margin of error for wind shear considerations verses intending to land as earliest point of runway threshold. Additionally, I would also utilize closer weather from Kelly AirField vs KCOS.
