Narrative history of the flight.

On 05/27/2024 we were going to take a trip from KT74 to KSEP. I obtained the Outlook briefing from Leidos/1800WXBRIEF on the desktop the day before and obtained a standard briefing that morning via Foreflight that morning, along with AWOS prior to flight. There were no concerns noted on any of the briefings that would interfere with the planned flight. We arrived at KT74 around 10:30 that morning. I completed the full pre-flight via the checklist and found no discrepancies. I was in the front left seat, my son was in the right front, and my Wife in the rear right seat. All of us secured the provided restraints as noted in the report, and a SAFETY briefing was completed. The before start checklist was completed, the airplane was started upon completing the start checklist to begin warmup. The avionics and light switches were turned on, and the AWOS was acquired. The parts of the AWOS I had noted on my kneeboard were wind- 070@3, temperature-31, dewpoint-24, altimeter- 29.94, and density altitude of 2,600. As wind was noted 070@3, and the geography to the north, vs the geography to the south being substantially safer in the event of an emergency, I selected a north bound departure on runway 35. The taxi radio call was made, and we then began to taxi on the taxiway to the farthest south entrance (at the numbers) to runway 35 for run up. Run up was begun. The run up was commenced as per the POH recommendations and the checklist. When it came to checking carb heat while at 2,000 RPM, the carb heat lever was moved to the on position. The motor made a loud popping noise, sort of like a backfire. The motor stayed running, however a larger than normal drop in RPM was noted following the popping noise. The carb heat lever was moved back to the off position, and the RPMs were reduced back to idle. The engine and all instruments were normal at idle. The RPMs were again taken back up to 2,000 RPM per the manufacturers recommendations for run up, and the carb heat was checked again. The RPM's on the repeat runup check decreased around 150 RPM's which was normal, and no popping noises or any other abnormality was noted on this check. The remainder of the runup was completed with no problems noted. I then completed the before take-off checklist, and I made the departure call on CTAF and entered runway 35. I entered runway 35 and stopped fully. Runway 35 was verified via paint and compass. The throttle was moved to full slowly (normal procedure) while I held the brakes, flaps were fully retracted. Once full power was reached, the takeoff roll was started. My hand remained on the throttle to verify it stayed full (normal procedure for me). Air speed came alive, all gauges were within normal limits (green), the takeoff roll was continued. Once 65 MPH was reached, rotation was performed and pitched for VY. The plane lifted off within the preflight calculated take-off distance. Shortly into the climb, the RPM's dropped into the 1500-1600 (approximate) range for an unknown reason. The pitch attitude was reduced to best glide. Throttle was confirmed full, mixture was confirmed full rich, carb heat was confirmed to be off, and the fuel pump was confirmed to be on. The proper fuel tank had been confirmed multiple times prior to take off and had not been moved since run up. I told the passengers to prepare for a forced landing. I maintained directional control straight forward at best glide speed. We impacted the top portion of an elevated dirt berm which turned out to be an old road that ran across the airport property. We bounced off that and then bounced one or two more times on the belly of the aircraft and came to a rest on the belly of the aircraft on the north edge of the airport property. The ELT was noted to be sounding. I then turned off all switches, the fuel selector, and the master battery and alternator

switches. We all exited the aircraft via the normal entry door under our own power and waited for emergency responders. EOR. JM

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Remove the old dirt road/berm to the north of the runway at T74. If that had not been there it would have been a standard soft field landing.
