

Statement from Michael Hinojosa

Certificate [REDACTED]

Student Pilot

May 7, 2024

At approximately 1500hrs started flight with instructor. Performed patterns and landings (3). I was then to solo to West practice area and return for landing. Takeoff was normal, flew 15 minutes to practice area and then returned. I entered the pattern, 2nd to land on runway 19 with information Kilo. Approach speed was 72-73 knots on centerline, no issue with winds. Rear mains touched down and front gear "skipped" 2 times then nose gear collapsed. Aircraft veered left, exited the runway and came to a stop.
