

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Hebron State: ND
 ZIP: 58138 Country: USA
 Latitude: 46.91° N Longitude: 101.99° W
 (Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 06/17/2024 Local Time: 7:10 AM
 mm dd yyyy Time Zone: Central

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N529KC

Manufacturer: Thrush Aircraft

Model: S2R-G10

Serial Number: G10-173

Year of Manufacture: 2012

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Make: ☐ Original Design

- ☐ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 6000 lbs *See special purpose load endorsement*
 Weight at Time of Accident/Incident: 6302 lbs

Number of Seats: 1 Flight Crew Seats: 1

Cabin Crew Seats: 0 Passenger Seats: 0

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
☐ Balloon
☐ Blimp/Dirigible
☐ Glider
☐ Gyroplane
☐ Helicopter
☐ Powered Lift
☐ Rocket
☐ Ultralight
☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☐ Normal
☐ Aerobatic
☐ Balloon
☐ Commuter
☐ Transport
☐ Utility

Special

- ☒ Restricted
☐ Limited
☐ Provisional
☐ Special Flight
☐ Experimental
☐ Special Light-Sport
☐ Experimental Light-Sport

- ☐ Certificate of Authorization or Waiver (COA)
☐ None ☐ Unknown

Landing Gear

(Check all that apply)

☐ Retractable

- ☐ Tricycle ☒ Tailwheel
☐ Amphibian ☐ High Skid

Airframe Total Time: 2184.2 hrs

hours measured at (Select one)

- ☒ Last Inspection ☐ Time of Accident/Incident

Type of Maintenance Program (Select one)

- ☒ Annual
☐ Conditional (Amateur-built only)
☐ Manufacturer's Inspection Program
☐ Other Approved Inspection Program (AAIP)
☐ Continuous Airworthiness
☐ Other, specify: _____

Description of Fire Extinguishing System

- ☐ None
☐ Specify: _____

Propeller 1

- ☐ Fixed Pitch
☒ Controllable Pitch
☐ Ground Adjustable

Manufacturer: Hartzell

Model: HC-B3MN-5L

Propeller 2

- ☐ Fixed Pitch
☐ Controllable Pitch
☐ Ground Adjustable

Manufacturer: _____

Model: _____

ELT Installed: ☐ Yes ☒ No

If Yes:

ELT Manufacturer: _____
 Model or Part No.: _____
 TSO No.: ☐ OC91 (121.5 MHz) ☐ OC91a (121.5 MHz)
☐ OC126 (406 MHz)

Was ELT still mounted in aircraft? ☐ Yes ☐ No

Was ELT still connected to antenna? ☐ Yes ☐ No

Did ELT Activate? ☐ Yes ☐ No

If activated:

Did ELT Aid in Locating Aircraft? ☐ Yes ☐ No

If not activated:

- Indicate Reason: ☐ Impact Damage
☐ Fire Damage
☐ Battery Expired/Damaged
☐ Unknown

Additional Equipment (Check all that apply)

- ☐ ADS-B
☐ Airframe Parachute
☒ Angle of Attack Indicator
☐ Autopilot
☐ Data Recorder
☐ Electronic Flight Bag or Handheld Device
☐ Electronic Multifunction Display
☐ Electronic Primary Flight Display
☐ Handheld GPS
☐ Heads Up Display
☐ Onboard Weather
☒ Satellite Tracking Device
☒ Stall Warning System
☐ Video Recording Device
☐ Other, Specify: _____

Installed New BRAKE DISC Blackglad + BRAKE PADS New Refuel
Forward Fuel tank NTS 6204350 - trailing wing with new - Checked bolts on stick
Wing Aft - Check for corrosion gland + tunnel gear bolts -

AIRFRAME - jacked aircraft, removed wheels, greased bearings and gear, checked brakes, checked retraction and emergency extension, checked electrical system & battery, check all controls for rigging and proper travel, lubed as needed, removed all inspection plates & checked structure, control cables and pulleys for wear and cotter, checked cockpit seat belts, all lights and instrument operations.

Date 4-25-15 Tach: 49350
I certify that this AIRFRAME has been inspected in accordance with a Annual inspection and was determined to be in airworthy condition.
Signed: [Redacted] No: [Redacted]

06/13/15 THIS AIRCRAFT N529KC HAS BEEN FLIGHT CHECKED ON 06/13/15 BY KEITH CHASE PILOT [Redacted] IN ACCORDANCE WITH CAM 8.10-3(E) AND WAS FOUND TO BE SAFELY CONTROLLABLE AND TO OPERATE SATISFACTORILY WITH THE FOLLOWING SPECIAL PUPOSE LOAD: 4000 LBS

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

Registration: Enter the operator registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting revenue sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Accident statement

Monday morning 6:00 am I headed out to the farm to spray Kevin Opps winter wheat field. I believe it was cool and clear at Hebron but there was a relatively high over Cast to the south. I got to the shop and greeted my dad, checked the weather on ForeFlight, the dewpoint spread was tight in glen ullin and some of the surrounding airports so I decided to wait a little bit for it to warm up. The wind was right to spray the field but was supposed to switch later that morning. I made a load sheet for dad then opened the hangar and preflighted the Thrush. Everything checked out and looked good. The sun was out and felt like things were warming up so I went back to the shop and told dad let's take the thrush down to the loading shed. We pulled the thrush down to the shed. The weather looked good so we decided to load the thrush. I fueled the thrush up to 150 gal. Which is more than enough fuel but that's the lowest setting on the Hatfield fuel selector. After fueling I drained all the sumps, spun the prop by hand and checked the oil again, it was 1/4" below the full mark, and is right where I usually run it and hadn't changed since the flight before where I test flew it and checked the spray system. I hopped in the cockpit. Checked my voltage, 24.8. Checked my controls engine and flight. Started the engine, it was a nice cool start 650*c at peak and nice acceleration. Engine parameters were good. Dad was done loading, he gave me 200 so I could charge my booms with chemical when I got to the field. The takeoff weight was 8040# which is a nice light load. I checked glen ullins weather once more, vfr, light east wind, dew point spread was increasing. Good to go. I pushed rpm lever to high, rpms rose to 96.5-97%. I pulled the power lever to reverse to release the prop locks, back to ground idle, felt the wind outside the cockpit to verify the prop came off the locks, set the flaps for takeoff, fuel pump on, igniter on closed up the cockpit, one last visual scan and flight control cycle before takeoff. Release brakes, advance power and taxied to the runway. I centered up on the runway, advanced power with my thumb on the rpm lever just as a mental check to have the rpm lever in high. Torque and egt increasing, rpm rose to 100.5% and settled back to 100% airplane is accelerating. And broke ground by windsock fuel flow was about 55gph. I don't recall what the torque and temp were exactly but they were well below limits. Climb out, flaps up, igniters and fuel pump off, fuel pressure good, oil pressure good. Ferry flight was non event all parameters were good. Circled the field a couple of times looking for obstacles proceeded to make a pass in the field to charge booms with chemical. Puffed some smoke to verify wind, good. Made a pass by power line while wind was still good and light. Made my a-B pass pulled up banked for my C pass. As I was descending into my c pass the plane abruptly accelerated, I could hear the wind from the prop get stronger over the cockpit. I was about 50 ft above the ground and not yet to the field. I immediately pulled out of the field and got some altitude to assess the situation, I knew it was bad because my left hand was on the spray handle the whole time and the engine changed without my inputs. I pulled the power back it seemed like the power did come down a little bit but my rpm's were way down 93%, I looked down at my rpm lever, it was all the way forward I pushed on it just to make sure, my egt was way high 620-640*, torque was high somewhere around 55-60 psi. I pulled the power back some more. I'm at the flight idle gate. At this point I've got some altitude and headed towards home. The rpm is fluctuating 91-93% the egt is around 600*c and the torque is fluctuating from 45-55 psi in a matter of a second or two. I flip on the fuel pump and igniters. I'm looking for a road in case this thing quits. I

call dad at 7:05 am and tell him something is wrong with the engine I'm on my way home. I'm approaching glen ullin now and I'm debating if I should go there, the runway is no longer than home, I've still got my load on, I'm doing 155 mph with the power lever back to flight idle, how the hell am I going to get this thing on the ground. I'm going to have to pull the emergency fuel handle. What if I over shoot , what if I under shoot I still have my load on. The gauges are still reading the same. I'll go home. I call dad (7:06 am) and tell him I don't have control of this engine I'm going to have to pull the fuel handle to get this thing down, I'm 5 miles out. About a mile and a half east south east of the home strip I'm entering a left down wind for runway 13 then "Peuhw" the engine just quit. Well shit here we go. I pulled the emergency fuel shut off, pushed the power lever forward, pitched up for best glide on my angle of attack indicator. Where am I gonna go , cant make the runway, the field in front of me, up hill angle, power line I'll never make it over. Trees, power line and a creek to my right, elevator to my left. The road to the north catches my eye. It's shit, long curve before it gets straight and I've gotta clear the wire before I get there. Yep that's it. I grab the dump handle and tell my self bleed it off, not too fast, it's gonna pitch up hard. I maintain alpha angle or 1 bar better on the AOA. Just about to the wire, I've got it cleared. Flaps 15* shit I'm coming up short on the road, not gonna make the straight of way, I'm starting to sink, I'm out of energy, I catch my self pulling on the stick as I'm sinking, push it forward keep it on alpha, road is coming up. I'm about 15 feet off the ground, the straight road is on my spinner but I'm not lined up with it yet and I'm sinking fast. Here we go, flare, bang. My tailwheel touched first, my left wheel is on the right side of the road, my right wheel is in the ditch. Bounce. Back in the air. Keep it straight. touch down again. Keep it straight. Left gear is on the right edge of the road then it folds up. Aircraft turns 90 degrees to the left tail gear folds up, the aircraft skids to a stop. Not sure if I had my eyes open for that last bit. Thrush N529KC came to a stop at 7:10 am cdt 6/17/2024 Well that just happened. I'm in one piece. Helmet off seatbelt off master off door open. I'm out, not a scratch. Nothing is on fire.
