Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Engine ripped off, hopper ripped open, airframe bent in half behind cockpit, both wings crunched on outer portions

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At approximately 10:30AM on Thursday, June 27, I took off from runway 36 at KLWD. This was my 5th load of the day. I was carrying 1700lbs of dry fertilizer and full fuel. I had taken that exact load for the previous 4 loads, and was heading to the same field. Nothing was new or different about this load. Before departure I did my normal run-up procedure that I do before every takeoff. Everything was normal, so I went forward with my normal takeoff procedure. The takeoff and initial climb out was normal. After gaining some altitude and clearing obstacles, I retracted my flaps and pulled my power back to my "working" setting. I turned out to the west and then begun heading south to where my field was located (about 10 miles south of the airport). On my ferry, I began to notice a lack of performance. I was struggling to maintain altitude and airspeed. One I realized this, I looked at all of my gauges and saw no abnormalities. I verified mixture and power settings and they were all correct too. As the sinking and loss of airspeed continued, I went to full throttle propeller in attempt to regain some airspeed and altitude, but the engine seemed to not respond to those inputs and I did not gain any power. At this point I decided to open up my gate and get out as much fertilizer as I could. A patch of woods was straight ahead of me, so I made a shallow turn just to veer just to the east and committed to an open field that was there. On my way in, I did not have enough airspeed or altitude to clear the tree line. I clipped the trees with my left wing, and impacted the field. All engine instruments indicated normal until impact (oil pressure, oil temp, fuel pressure, RPMs, and manifold).
