Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right landing gear bent back and wheel detached. Propeller broken off. Cabin frame distorted. Both wing struts bent. Right wing rip broken.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Preparing for take off check list - mag check, rpm 2100 ok, altimeter check, density alt 9700 from 6250 MSL with light load, no wind. Started normal take off roll on the dirt runway/taxiway 17L for a normal south takeoff to do take off and landing practice. Everything seemed normal until one third down the runway I had no rotation and "sluggish feeling" of the aircraft. It bounded twice but still no off. At the half way point I decided to abort take off and return but at the runway end I found that I could not turn right to stay on the taxiway and ended up going straight off into the brush and hit a gully which intern flipped the aircraft over on it's back. I was being held by the saft harness upside down and felt that I had to exit the aircraft as fast as possible to avoid a possible fire. I released the buckle and went crashing down in the panel and overhead where I suffered a severe laceration to my head and right leg. I exited the aircraft with considerable bleeding and meet a fellow pilot (Ron Paxton) who called 911 and thus a trip to the ER. Later examination of the wreckage suggested that the right wheel mus have started to detach the aircraft on the takeoff run and was "dragging" thus preventing full take off roll.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

No way to know that the wheel axil would break but a more thronal examination of landing gear is advised.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Right landing gear wheel axil broken weld. Experimental made.
