NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Our PA28-181 had just come out of annual on the day of the accident, so we decided to take a short flight to have dinner at KLBX, a local airport with a restaurant. This is normally about a 20 minute flight.

The annual took longer than expected, mostly because of availability of small parts and of the mechanic. It had been a little over 3 months since the plane had flown.

KAXH AWOS was not operational, so we did not get weather from that. Foreflight was used to get overall weather and other local flight conditions. There were no obvious weather or TFR issues. Windssock and a flag near us indicated 3 to 6kts wind from due south. The wind might have been a bit stronger as we went up.

We pulled the plane out of the hangar, sumped both tanks and the fuel pump sump. We did not see any water. We then called for fuel and added roughly 13 gallons to each side. The right side was full full and the left side was about half an inch down from the fill neck (essentially full). We did not sump again after filling the tanks. Fuel selector was set to right side tank. Engine crank was normal and it started immediately. We sat with the engine running at about 1000 rpm and checked all functions. Everything looked and sounded good.

We then taxied to the east end of runway 27 and pulled off onto a hangar ramp for our runup. Because it was fresh out of annual, we were extra careful with our preflight and runup and checked all functions several times. Over the last few months before going into annual there had been a few times when the fuel pressure gauge went below the green with no apparent effect on engine running either at idle or full power, and the gauge went back to reading in the green after a few minutes. We discussed this with the mechanic and we all decided it would be a good idea to replace the existing mechanical pump with a new one. During the runup we did not notice any issues with the pressure gauge. It stayed in the green with the electric pump switched off and the engine running at 2000rpm.

Takeoff seemed normal, as did initial climbout. We reached an altitude of no more than about 300 feet when the engine completely quit. I immediately pushed the nose down and checked throttle position and maybe some more things before totally focussing on landing. (My son tells me I did a few quick checks to see why the engine quit, but I only remember flying the plane.) The crosswind had pushed us to the right of the runway, so I headed toward the runway centerline at the end of the runway. Maybe 10 seconds after engine failure we hit the ground near the end of the runway with the left gear and wingtip. We remained upright as we slid off the runway about at the center line. I tried for a few seconds to call the FBO on the corded microphone. Then we shut down the master and magnetos. We undid our seatbelts and pushed hard to open the door after it was unlatched and get out of the badly damaged plane which was tilting about 20 degrees to the left. The left wing was nearly completely detached and fuel was flowing from a line beside the pilot's window. The right wing was intact which made it relatively easy to get out onto it and then onto the ground and away. No injuries other than some bruises and seat belt rash, so we were very lucky.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

SINCE WE DO NOT KNOW WHAT CAUSED THE ENGINE TO QUIT IT IS A BIT HARD TO KNOW WHAT WOULD HAVE PREVENTED IT.

THE PLANE HAD JUST COME OUT OF ANNUAL, SO A MUCH LONGER RUNUP AT HIGH RPM MIGHT HAVE CAUGHT THE PROBLEM BEFORE GETTING IN THE AIR. I THINK A FEW HIGH SPEED TAXI RUNS ON THE RUNWAY WOULD HAVE BEEN USEFUL AS WELL.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

SHORTLY AFTER TAKEOFF THE ENGINE QUIT WITH NO WARNING. WE DID NOT RECOGNIZE ANY IRREGULARITY PRIOR TO THE ENGINE STOPPING.
