**NARRATIVE HISTORY OF FLIGHT** *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I came in for a straight in approach on runway 18 at lakeview airport. I had checked the weather at both North Texas Regional (KGYI) and Denton Municipal (KDTO) prior to landing.

I reported my position 10 miles north of 30F over the Lakeview CTAF (122.9) with the intention of a straight in for runway 18, then again for 5 miles, and last a 3 mile final for runway 18 call. At 3 miles I was at pattern altitude of 1500 feet and reduced power to 3800 RPM and set flaps to 0 degrees. Once my speed was below 80 knots I increased flaps to 15 degrees, and as I reached 60 knots I increased flaps to 30 degrees. This is my typical approach procedure.

I maintained a speed between 55-60 knots and aimed for a spot maybe 100 feet from the north side of the runway. I got into ground effect and floated for quite a while but eventually was able to touch down relatively flat with minimal flare.

Within a moment of having all 3 wheels on the ground, a large gust from the West picked my right wing up, removing my right tire and front wheel from the ground and turning the aircraft towards the tree line. The trees are only about 25-30 feet from the side of the runway so I immediately applied full right roll but was unable to get the right wing to come back down and put all three wheels back on the ground. To avoid a straight on collision with the trees at 40-45 knots, I applied full power and continued to have full right roll.

I was still unable to get the right wing to come back down and pulled back on the stick to try and clear the tree line. I was able to clear the first set of trees but it didn't look like I would clear the tallest tree in my path so I rolled left slightly to avoid that tree. I knew at this point that I was going to stall so I pulled my harness straps tight on my right side and pushed slightly forward on the stick to try and level out before I hit the water.

I impacted the water at 10-15 degrees pitch down and the windshield immediately busted inwards due to the water. I removed my seat belt, pulled the door latch, and swam in front and around the aircraft towards the land. My back hurt at the moment of impact but I didn't hit my head or feel any other pain. I was able to swim to shore, walk through the fallen trees, and reach the runway where I signaled for my girlfriend who had been waiting to pick me up to come help and call for help.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

If I had known beforehand that there would be a large crosswind gust possibility I would have diverted to KDTO. Given the weather I had retrieved, I wasn't expecting any such gusts. In hindsight I feel like my only two options were to hit the trees or attempt an aborted landing. Going forward I probably won't land a light aircraft on the paved runway at Lakeview again. The combination of obstacles on each side of the runway and the tree line being so close to the paved surface leaves little room for pilot error, mechanical failure, or weather related problems.

EVACUATION OF AIRCRAFTWas an emergency evacuation of the aircraft performed? ☒ Yes ☐ No

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location

Before the plane had entirely filled with water, I was able to remove my harness and open the pilot side door to exit the aircraft. I swam slightly away from the aircraft and then around the front of it towards shore. I was able to find a spot on the shoreline with just enough opening from the downed trees and bushes to get through and back towards the runway.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

I was told the day after the accident by the airport owner that someone doing landscaping at the airport was in the process of packing leaves on to a trailer when I came in to land. They said that right around the time of my accident a large gust blew all of the leaves out of their trailer.

I sustained a compression fracture of the L1 vertebrae.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
