NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was the PIC of the aircraft at the time of the accident on Tuesday, July 30th, 2024. Mr. Robert Jonte, my co-pilot, met at Castroville Municipal (KCVB) after work around 6:00PM local time. Our plan was to stay in the pattern and do five touch-and-goes each. This was my third time flying Cessa 150 N8840S with him. We both thought it would be beneficial to get some flight time in. I'm currently training towards my IFR rating at Barrio Aviation based at Kelly Field (KSKF), and we sometimes fly to Castroville.

The plane had 35 gallons onboard. It was within its CG range with just us two with similar built at about 180lbs each in the front seats and our two small flight bags in the back. We discussed how we would manage the wind, as it was gusting quite a bit doing preflight. The last ATIS weather report I got after starting the engine was wind from 130 at 15 knots and gusting.

My first three touch-and-goes from runway 16 were successful. Each time I had to widen my downwind a bit and shorten my base to final some. The wind pushed me in on the downwind leg each time, but I stayed coordinated and corrected for the wind. On final I was getting a left crosswind which I corrected with left rudder and some aileron to stay aligned with the runway. My third landing was on centerline.

My fourth touch-and-go was playing out similarly. On final the PAPI was reading one white and one red to its very last leg. Just as the right mainwheel touched down, I got a gust of left crosswind. My landing airspeed was within the range of the landing configuration with no flaps (75 – 85 knots), which is the higher end of the allowable landing speed range. The airplane then bounced once and ballooned some. I decided then and there to go around by applying full throttle cause the plane could topple as it was leaning aggressively to the right. The aircraft picked up speed. Meanwhile I'm trying to level the wind so I can get some ground effect. For a moment it seemed as if I would generate enough lift before it stalled in field.

Fortunately he and I did not suffer any serious injuries and were able to immediately get out of the plane. I would like to thank the fire department, the ambulance, and relevant law enforcement authorities for coming to our aid at the scene within minutes. I was questioned at the scene by law enforcement and made a report to NTSB when I we got to the airport lobby.
