Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft flipped on its back upon entering 3' tall grass and soft soil on the runways overrun area. Aircraft sustained significant damage to tail section and top of wings.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I departed KHPY airport (Baytown TX Municipal) at 9:00am in route to KGPM airport (Grand Prairie TX Municipal) Saturday August 3, 2024, a projected 1.2 hr flight in my experimental Tailwind W10 aircraft. I flew north out of the Houston Class B airspace at 2000' and then climbed to 4500' on a clear day for a pleasant smooth ride. At about the half way point I heard and felt the engine misfire. All engine instruments looked normal and all temperatures were in the green however a few minutes later I got another miss fire and I decided to return to Baytown. In a few more minutes I felt something else and another noise which led to a very significant loss of power. I could not maintain altitude and began a slow decent. I decided to land at the first airport in front of me which was Livingston Municipal airport (OOR). I didn't have a lot of time for trouble shooting, I had to cross a fairly large body of water (Lake Livingston) between me and the airfield, I was busy manipulating airspeed and altitude trying to stay as high as possible so as to clear the lake below. When I saw the airport and had cleared the lake I was still quite high and put the airplane into a heavy slip to lose altitude and airspeed at the same time. I made it to the runway but still had some excessive airspeed. I almost had the airplane stopped but ran out of hard surface before entering the tall grass and soft soil. The aircraft's main gear dug into the 3 foot tall grass/soft soil and flipped on its back.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Lack of airport maintenance definitely played a part in damage sustained at landing. The airport runway overrun area had excessively high uncut grass. Even a much larger aircraft would have received heavy damage.
