Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

This was a normal balloon flight in Colorado Springs. Nothing out of the ordinary occurred. The balloon launched from a vacant field near the Colorado Springs airport. Routine. The flight lasted 45 minutes to an hour, estimated. The balloon landed in a normal vacant field that has been used in the past. The landing was rated at 6.5 out of 10 for a typical balloon landing. We use three categories for landings, A, B and C. This was a C type landing where the balloon ends up on its side. The approach to the landing field was at the end of a housing subdivision. The balloon had a fairly steep approach to landing thus the impact was hard but not excessive. (I've had way worse) Winds were calm, 2-5 mph.

8 guests were on board. Manifest is attached to this report. 3 groups (2 adults and 2 minors, A young couple estimated to be in their 30's and two seniors estimated to be in their 70's.) The injured party was one of the parents of the minors.

Guests are prepped in advance of the flight as to the types of landing that can occur. They are then reminded just prior to landing to follow the landing instructions, (Bend your knees, stay low and hang on). A C type landing ends with the balloon bouncing several times and then dragging to a stop. The balloon then deflates and lays over on its side and this is how the landing proceeded. Once deflated we climb out of the basket. I assisted the two seniors guest in climbing out as it can be awkward. All guests were out when I looked over and saw the children supporting the dad. I asked what's up and he said I think I blew out my knee. I was surprised to hear this and we helped him into our chase suburban and he asked to be taken to the ER. (A follow up phone call to the guest revealed he had broken his ankle.)

It was very typical balloon ride for our area. You can never tell in advance what the landing will be like. All guests appeared to be sporty individuals ready for the adventure.

Weather information has been estimated as for this time of year. Typical VFR flight conditions existed at the time. Information was not recorded as the normal flight ended not as a reportable incident. Photos were not taken. The balloon was packed up in its typical manner and there was no damage to the aircraft.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The only sure way would be to not fly. Ballooning can be rough and hard landings should be expected in a craft without wheels and brakes that use friction to stop.

I do not know if the guest stepped on his water bottle or was just weak boned but it was very surprising.
