NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I performed a preflight on the aircraft with no discrepancies. Normal VFR flight, departed KMIC with no issues with steering, braking or with the landing gear or gear indicator lights.

I flew NW and returned after about 50 minutes with a straight in approach to runway 14 at KMIC as approved by KMIC Tower, I had listened to the KMIC ATIS information.

On approach to runway 14 at KMIC, I extended the landing gear with no issues, and I had 3 green landing gear indicator lights on approach, I performed a GUMP check several times.

I advised the tower I would be stopping for fuel.

Weather was clear and winds where I believe around 15 knots gusting to 22 knots with a slight variable crosswind from the right (about 160).

Normal approach, with 2 white and 2 red lights on the VASI, about 75 KIAS, landing gear was down with 30 degrees of flaps, on landing flare the aircraft caught a gust of wind and climbed about 3-4 feet, and I landed on the runway aiming marker centerline firmly, but not exuberantly hard, and I did not notice any issues.

I was cleared to taxi for fuel. I added about 30 gallons of fuel.

After I fueled the aircraft, I was cleared to taxi to the hanger, which is located at Charlie 2, I taxied to the hanger with no issues.

The braking and steering were normal during landing and taxiing. I parked the aircraft in the hanger.

There were no known issues with the aircraft until the next day when my son flew the aircraft. He performed a preflight on the aircraft and did not note any discrepancies. He had a normal taxi and takeoff. After takeoff, he retracted the gear and the "gear in transit" light stayed on. He cycled the landing gear and the "gear in transit" light stayed on with the gear retracted. He extended the landing gear and had 3 green gear indicator lights. He returned to KMIC with a normal approach and landing at KMIC with no issues. He had a normal landing and taxiing. There were no issues with braking or steering during landing and taxiing.

He called me to advise me of the "gear in transit" indicator light staying on, and I later went to the hanger to inspect the aircraft.

I inspected the main gear and nose gear in the hanger, (not jacked up), on the ground.

The gear struts all operated normally on the ground, and I lifted and lowered the aircraft to see if the struts moved properly, which they did. I got down on the ground to inspect the landing gear and looked up into the wheel wells of the main gears and the nose gear and could not see any abnormalities.

In the past the aircraft had issues with the gear sensors and wanted to see if the sensors were the issue, I did not see any obvious issues with them.

In the past the aircraft had an issue with the sleeve on the nose gear not straightening the nose gear upon gear retraction, I did not see and obvious issues with the nose gear.

My son called the AP mechanic I use at KRST. The machinic told him he could look at it on Friday 9-6-24.

I asked my son to fly the plane to KRST on 9-6 with the landing gear down the whole way, which he did again without incident, again no issues landing, taxiing, steering or braking. I asked him to fly with the lander gear down so the hydraulic landing gear pump would not stay on and overheat.

At the mechanic's hanger the aircraft was lifted up on jacks and the gear was cycled with the cowl removed and broken engine mount at a nose gear attachment point was noted, and the mechanic notified the FAA. The FAA contacted me and asked me to complete this report.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The firm landing may have caused the engine mount failure. I would suggest pilots consider any possible problem when there is an indicator light notification. Be cautious of wind gusts.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
