Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Knocked off tail tiedown ring and ground off some sheet metal of the empennage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The incident occurred during the students second solo flight in the pattern at KSCB Scribner Nebraska.

Prior to taking runway 17 the student observed an aircraft on final approach for runway 35 (opposite of the favoring winds). This aircraft was followed by four others of the same type (LSA) that were cruising toward the airport from the west south west at low altitude. All five aircraft landed on 35 and taxied off the runway and parked in the grass island between the runway and taxiway (beyond the hold short line) as if there were some sort of event going on.

Once the runway and approach were clear, the student took the runway and proceeded with the takeoff roll.

In the downwind the student observed what seemed like additional activity in the area of the parked LSA's and then neglected to begin the power reduction that led to a lack of altitude loss in that portion of the pattern. When turning final the student noted a higher than normal altitude but decided to continue with the approach after making additional pitch and power changes. With 4,200 feet of available runway a touchdown a third of the way down the length was not an issue however, the students airspeed on short final was high which resulted in a ballooning effect upon touchdown and an ensuing porpoise oscillation began. The student believed she could correct the effect but after 5-6 oscillations the tail hit the runway and knocked off the tail tiedown. After the loss of the tie down ring the aircraft settled and she was able to slow the aircraft and make the turn off at the end of 17 and taxied back to me.

- David Zimmerman

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

The instructor pilot believed the student to have the knowledge and skills required to attempt her first solo. It may be that the other flight operations occurring at the same airport, although different runway, caused a distraction. The student pilot on her first solo, may not have been as ready as the flight instructor believed her to be. Additional training and experience would have better prepared her for distractions and given her better aeronautical decision-making skills on recovering from an unstable approach and when to decide that she should take the option of performing a go-around instead of forcing the landing.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
