☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Nose gear collapsed

Engine mount that supports nose gear with minimal deformation

Areas of damage to carbon mounting location of engine mount up to approximately 3 inches

Propeller damaged by contact with ground from collapse of nose gear

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

After storing and locking the airbrakes, I resumed my typical and recently trained landing position of right hand on throttle and left hand on control stick.

Immediately after touchdown, there was an upward pitch followed by episodes of increasing variation in pitch then sudden downward pitch that likely corresponded to collapse of the nose gear and associated prop damage, etc.

After coming to a stop on the runway, I turned off lanes A+B (fuel injected engine), turned off fuel pumps, avionics, and main switches, and quickly exited the aircraft.

Observers quickly ran onto the runway to assist, including removing the aircraft and debris from the runway.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

In retrospect, I believe that the most likely explanation for this incident was 'porpoising.' I should have recognized the upward pitch after touchdown as a mild bounce that escalated into an unrecoverable set of pitch alterations that lead to the collapse of the nose gear. The most important intervention that should have been applied is attempting to execute a go-around by applying full power immediately after recognizing an abnormal touch-down. Secondary improvements would be to improve energy management within the final steps of landing including avoidance of what was likely a nosewheel-first landing.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
