Accident of N565CP on 9/25/2024

My wife (Janice) and I left Tyler, Tx (KTYR) at 17:30 for a 1 hour flight to Lakeway Tx (3R9). She travels with me and keeps our checklists in her lap that we both go over each phase of flight. We cruised at 6,500' to avoid a few clouds. 30sm from Lakeway I began a 500 fpm descent to reach the 1,900' traffic pattern 4sm from Lakeway Airpark. During the descent, reduced power to 50% after going mixture rich and turning on the fuel pump. During the descent also got the weather from Lago Vista (KRYW), being the closest reporting airport. Weather was reported as winds from 030 at 10 gusting to 16kts. Based on the weather planned a landing toward the North on runway 34 at Lakeway. At 10sm made a position announcement for Lakeway Traffic. At 5sm made a position announcement for Lakeway traffic and turned slightly North to avoid any possible noncommunicating Lakeway traffic. After making a left turn for the downwind leg, made a position announcement to Lakeway traffic. Abeam the South end of the runway, I reduced power to 40%, installed the first notch of flaps and began a descent. After making the base turn, once again made a position announcement for Lakeway traffic, installed 100% flaps and reduced power to 30%. During the final approach there are high power lines on a ridge perpendicular to the runway that require a shallowing of the approach descent. After passing the power lines a slightly steeper descent was made. Over the displaced threshold the aircraft suddenly dropped making contact with the threshold and bouncing us forward. I increased power during the drop with no affect. The stall warning horn went off while in the air during the bounce. We hit the ground next to the runway in a nose down position and slid to a stop. My wife and I both exited the aircraft. She has sustained a cracked sternum from the accident. I received 4 stitches on my left knee and have pain in my neck.
