Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

3" deep, 12" wide depression to top of leading edge of left outboard wing, approximately 12" from the wingtip.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Friday, September 27, 2024, at 13:42, a passenger and I departed on an IFR flight plan cleared from KENW to KFCM at 10,000 MSL via Radar Vectors, HAWKN, ROBBY, EAU, AGUDE.AGUDE5. At 14:45, ATC cleared us to KFCM Direct. At 15:02, Minn Center assigned me to descend and maintain 4,000 MSL, and shortly after that, 3,000 MSL. I commenced a descent of 500 FPM. At 15:12, 4,100 MSL, I sustained a bird strike to the left outboard wing. The bird was above my flightpath descended into the left wing at about a 40-degree downward angle. I observed this in a split-second flash simultaneously with the sound of an impact.

I immediately assessed my situation before making any adjustments. The engine was running smoothly and properly, there was no change in the propeller's operation, the airplane was flying without any appreciable change. The damage to the wing was static and I observed no further changes at the impact area such as loose metal, outboard wing movement, deformations along the entire wing, and leaking fuel. I reduced power and slowly and smoothly changed my attitude for level flight to begin to slow the airplane. Shortly thereafter, I lowered the gear and after normal gear extension, extended flaps to 10 degrees. I slowed to between 105-110 KIAS and in level flight at 3,000 MSL.

Shortly after the bird strike, I contacted Minn Center and alerted them of the bird strike. In a number of communications, I relayed the souls on board (2), fuel on board (approximately 59 gallons), condition of the aircraft performance, and description of the visible damage to the wing. Center told me they were going to declare my flight as emergency status. Center asked my preference for 28L or 28R at KFCM. I selected 28L as it was the longer runway. Center asked if I wanted KFCM to roll out the emergency vehicles. I replied negative, it was not necessary. I continued direct to 28L as cleared, switched to Tower when directed, put the airplane in landing configuration of full flaps, slowed at Final to 85-90 kts KIAS, landed uneventfully, turned off the runway after slowing and stopped. I retracted the flaps, turned off the pitot heat and waited for clearance to cross 28R and taxi to Inflight Aviation at KFCM. At Inflight Aviation I parked where directed and performed engine shut down.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

I have no idea. Many times there are NOTAMS and advisories regarding birds at or in the vicinity of the airport, but this encounter was at over 4000 ft MSL. Extremely random accident.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
