Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Right landing gear, spinner, cowling, prop strike, left and right wing tips. No damage to other property, persons, or other aircraft.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At approximately 9:10AM, I departed KGJT southeast VFR to Blake Field Delta I had a passenger on board, Daniel Scheerer, who is a personal friend. At approximately 9:50AM I was landing on runway 3 at Delta Blake field. During the landing, I allowed the plane to sink to the runway faster than intended and it bounced off the main tires. The plane was also turning left toward the edge of the runway, so I initiate a go-around. I applied full power, however failed to keep the plane from leaving the left side of the runway. The plane had started to barely fly, however the wheels were hitting thick bushes and bounced several times off of uneven terrain and rocks, which slowed the airspeed. The terrain is also upsloping. As the plane was starting to gain altitude, the right main hit a large rock. This rock was the last contact with the ground during the go-around.

After regaining control of the plane I saw that the right main landing gear had been badly damaged and the right tire was twisted sideways. I could not tell the extent of damage to the airplane, however the impact with the rock had seemed very hard and I believed there could be unknown additional damage to the plane. I called on the KAJZ CTAF to state I had made a go-around and damaged the right main gear and would be performing an emergency landing. After consideration, Runway 32 seemed appropriate because the dirt would be more forgiving and the terrain to the sides of the runway was more gentle. Because the plane was flying and the engine seemed to be functioning normally, I made a low practice approach on Runway 32 prior to my actual landing. The approach seemed good and I felt prepared to land, so I proceeded to land on my second approach to Runway 32. Because I suspected the right main gear would not support the weight of the airplane, I attempted to dissipate as much airspeed as possible while still allowing a smooth and gentle touchdown. The plane did touch down very gently and at first both tires skidded across the dirt gently, however as the plane continued to lose lift, the nose of the plane dropped forward and to the right as the right landing gear collapsed under the weight of the plane. The nose of the plane hit the ground, then the right wing, then rolled to the left and came to a stop on the nose and left wing tip.

I immediately told Daniel to get out of the airplane first, as had been discussed during our pre-flight briefing, and I secured the engine and turned off the battery master before immediately exiting after Daniel. We stood about 30 feet away from the airplane and could see someone was driving out to meet us.

Blake Field staff had alerted EMS to the incident and Sheriff, ambulance, and fire personnel each responded, however both Daniel and I declined any services as we were not injured in any way. I contacted the NTSB, reported the incident, and received permission from Bradley Miller to move the airplane to a hangar. Blake Field staff assisted with putting the airplane on a flatbed trailer and it was moved to an indoor hangar.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

I could have prevented the accident by having a better initial approach to landing and touchdown on Runway 3 during the first landing attempt. I allowed the plane to sink faster than I should have and should have added power or made a go-around decision prior to touching down. After the touchdown and during the go-around, I failed to maintain sufficient directional control of the airplane to keeping it from leaving the runway and going into the bushes. More time with an experienced instructor would also have increased my proficiency in the tailwheel.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
