Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Empennage was damaged and misaligned, tail boom dented, tail rotor shaft broken, and tail rotor blades deformed.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Commercial pilot and instructor pilot practicing emergency procedures at Wolfe Airpark (3T2), a grass runway in Manvel, TX. The crew performed multiple autorotations in the pattern at the airport. On the last pattern and autorotation, the crew entered the procedure at 800ft AGL at 80 kts of airspeed. During the flare portion of the maneuver, the pilot held the flair too long and possibly too low and lost altitude striking the tail of the helicopter on the ground, which in turn damaged the empennage, tailboom, tail rotor shaft, and tail rotor blades.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Review SOP's for conducting check rides for pilots with a review of the below listed items:

- Set a "hard deck" altitude for practice autorotations.
- Seek out and research specialized autorotation training for the CFIs to increase their knowledge and teaching abilities for autorotations.
- Request additional autorotation training by manufacturer for all pilots.
- Additional simulation training.
