NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

N130GP was a BE-99, C-model, SN U-222, and was operating Ameriflight AMF1686/AMF1685* on the evening of October 7th, 2024, flying on behalf of a United Parcel Service (UPS) contract to serve the following communities in Nebraska: O'Neill (ONL), Norfolk (OFK) and Omaha (OMA). The pilot in command (PIC) assigned to this flight was Captain Philip K. Widner, Commercial Pilot certificate [REDACTED]. The flight departed OMA, landing first in ONL where it picked up cargo, and then flew to OFK. In OFK it loaded additional cargo, and departed for its destination, OMA.

AMF1686 conducted an empty reposition flight from Omaha, NE (OMA) to O'Neill, Nebraska (ONL). AMF1686 departed OMA at 16:04**. Upon arriving at ONL, four (4) pounds of cargo in Zone F, which is the first bay aft of the cargo door. Ordinarily, UPS personnel are responsible for the loading of cargo. The BE-99 is partitioned into 7 separate cargo zones, also called 'bays,' that are delineated by placards on the cargo zone interior as well as cargo nets that comprise the forward and aft limits of each zone: Zone A, Zone B, Zone C, Zone D/E (combined), Zone F, Zone G and a belly pod underneath the main cabin. In addition to the UPS cargo loaded in Zone F, the pilot reported loading 100lbs of ballast in Zone G (note: 100lbs is the maximum weight for Zone G). Additionally, it is typical to carry ballast onboard BE-99 flights, because the BE-99 aircraft tends to favor the forward center of gravity limits – when lightly loaded or when no load is present (beyond PIC and fuel). The PIC completed the load manifest form and provided the UPS personnel with a carbon copy, which is company policy. The way the PIC loaded this aircraft was standard. The PIC also requested that 73 gallons of fuel be added to N130GP from the fixed-based operator at ONL (November Sierra Aviation, LLC), bringing the total reported onboard fuel (in weight) to 2300lbs. This onboard fuel report was based on both the provided carbon copy of the load manifest, and dispatcher comments entered in our FlightOps tracking software. The dispatcher will ask the PIC for the total onboard fuel during the flight release discussion prior to departure. This would provide approximately 3.4 hours of flight time with one (1) hour of reserve, one-hour being the Ameriflight reserve fuel policy set forth in the General Operations Manual (GOM). The remaining flight time from ONL to OMA, with the planned intermediate stop of OFK would be approximately 60 minutes: 25-minutes ONL to OFK, and 30 minutes OFK to OMA.

Flight AMF1685* departed O'Neil, Nebraska, ONL at approximately 1830L on Monday, October 7th, 2024, for the 25-minute scheduled flight to OFK. The straight-line distance between ONL and OFK is 63 nautical miles. Visibility and sky conditions were 10SM and CLR respectively at both the departure airport (ONL) and the destination airport (OFK). I will refer to this as "VFR weather," (visual flight rules). No NOTAMs were active at the time of departure or arrival that would have increased the risk of this flight.

KONL 080035Z AUTO 15007KT 10SM CLR 18/02 A3007 RMK AO2 T01830015

KOFK 080056Z AUTO 16006KT 10SM CLR 15/03 A3009 RMK AO2 SLP195 T01500028

(The above reports were generated using www.aviationweather.gov. I used the "last 96 hours" function, and the above report was generated approximately 21:00 on Wednesday October 9th.)

From available 3rd-party radar/flight following data (www.flightaware.com), AMF1685 departed ONL using runway 13 and proceeded southeast on a direct course to OFK. It appears that at approximately 20 NM northwest of OFK, AMF1685 began to maneuver for a straight-in approach to runway 14, which appears to have been selected due to a combination of prevailing surface winds and ease of planning – e.g., a reduced amount of gross maneuvering was required for runway 14, and it also is served by an LPV-capable RNAV approach.

The landing and subsequent loading of the aircraft for the next leg appeared to be uneventful based on a verbal statement from local OFK pilot, Mr. Timothy Miller and the video footage of the ramp area from the OFK. The PIC loaded an additional 611 pounds of cargo. 46 pounds of cargo were loaded into Zone F (which brought the total cargo from the previously loaded 4 pounds to 50 pounds), and the remaining 565 pounds were loaded into Zone D/E, which was the zone adjacent the cabin door. The cargo load location, which is dictated by the PIC, appears standard. Loading cargo 'at the door' (Zone D/E) when the overall aircraft payload is light is advantageous because it offsets the previously mentioned tendency of the aircraft to be 'nose heavy' regarding the center of gravity. As was the case in ONL, the PIC provided the UPS personnel with a carbon copy of the load manifest form before departing.

During the time of departure, VFR weather prevailed at both OFK and OMA, and the active NOTAMs at OMA on October 7th would not have increased the risk of this flight to an unacceptable level.

(The above reports were generated using www.aviationweather.gov. using the "last 96 hours" function. It was generated approximately 21:00 on Wednesday October 9th.)

Wreckage of AMF1685 was located by emergency responders in a small field just southeast of the OFK airport boundary, a post-impact fire consumed most of the wreckage. Christopher Adams, Ameriflight's Chief Pilot and a check airman in the BE 99, reviewed the data and information contained in this narrative. He is familiar with not only AMF's OpSpecs and procedures, but also the flight characteristics of this aircraft. Based on his background and the documentation available, it appears that Captain Widner complied with applicable policies and best practices.
