Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Hard Landing caused wing collapse, Airframe Tubes Bent & Twisted

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Test Flight after Replacing Engine monitor with more advanced model, along with to check EGT & Cylinder Head Temps after Replacing O-Rings in Carburetor. Full power Runups Done for several Days prior to accident to adjust idle and temps to become even. Another Full power Runup at Runway for at least a minute before flight to last minute check for RPM & Temps before flight, all acceptable. Take off power was normal RPM with temps ok at takeoff roll, airborne was quick. Goal at this airfield due to short runway & RR track at the end is to climb and accelerate to high speed in case engine failure in order to safely land beyond the RR and into the adjacent field. Unfortunately, there was a stationary train parked on track. Had I established figured glide angle straight ahead, I would of struck the car head on. I elected instead to turn right and put the plane down on a patch of grass (Engine went to IDLE at 100')

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

The turn I made caused an unsurvivable loss of speed from which I couldn't roll the wings out and flare enough to ~~soften~~ soften the touchdown. I had to make a last second decision to avoid the train cars.

Looking back, I shouldn't of taken off with a train parked at the end of the runway, just increased the risk

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

ADDITIONAL INFORMATION (Additional space for answers to any question.)

After Liftoff, leveled at 100 feet to build Airspeed.
a few seconds Later the engine went to IDLE Power.
with Already airborne, it was too Late to abort Takeoff
and with a Train car ahead, The Glide angle on this model is
very Low and I had to avoid crashing into the Train by turning
right to put down in a grassy area.
