

EMERGENCY RESPONSE - AIRCRAFT

NOTES

Approximately 8:29-8:45 AM I was ^{ONE OF} preflighting the helicopter on one of the landing pads the helicopter on the pad was getting ready for take off when I notice the helicopter was lifting off the helipad and all of a sudden the helicopter lifted ^{about 20-25 ft} fast and started spinning out of control I ran out of the way the helicopter came down making contact with the ground still out of control the helicopter lifts up and went about 20-25 ft in the air and came down making contact with the ground in a reverse mode hitting a small air plane and came to a stop. also when the helicopter lifted I notice it started yawing in a counterclockwise rotation also with everything happening so fast and me ~~get~~ running out ~~the~~ ~~way~~ ~~harm's~~ way I can't remember how high the helicopter went up the second time.
