DAMAGE TO AIRCRAFT AND OTHER PROPERTY**Aircraft Damage**

- ☐ None ☐ Substantial
☒ Minor ☐ Destroyed
 ☐ Unknown

Aircraft Fire

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

The main damage to the aircraft was the folding back of the right main landing gear leg and gear leg attachments. One of three blades of the propeller was damaged. Whether or not damage to engine occurred is yet to be determined. Right wing was damaged on lower inboard skin due to right wheel pant impact. Right outboard leading edge skin damage and at least one leading edge rib due to the aircraft coming to rest on the right wingtip.

Damage to temporary above ground PVC pipes and sprinkler system valves.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The aircraft departed runway 18L at KDTO on a local VFR flight at 08:57 AM CST with 26 gallons of fuel (approx 3 hours of fuel at normal power settings). Surface winds were light out of the SW.

Initially flew west then north to Gainesville area, then northeast to overfly 3T0 Cedar Mills Airport. Ceilings and visibility throughout the flight were unlimited. Winds above 2000' were estimated 230 @ 25-35 knots.

Flew southwest to 0F2 to perform a practice RNAV approach to runway 35. Winds were light from WNW. A low approach was conducted and departed the pattern to the southeast back to KDTO.

Obtained the ATIS for KDTO. The reported winds were 260 at 13 gusting 21. At approx 12NM northwest of KDTO contacted tower for a full stop landing on 18L. Was instructed to report a 4 mile final for 18L. Intercepted to localizer for 18L at PINCK and performed a normal approach for landing. Winds on approach were 20-25 knots from the west. Full flaps were selected for landing. Using correct crosswind technique, the aircraft touched down at 10:15 AM CST on centerline approximately 1100 from the runway threshold, adjacent taxiway A2 with the intention to exit left at taxiway A3. On touchdown, as the tail was lowering and the aircraft starting to slowdown (approx 1600 feet down the runway) the nose yawed suddenly to the right and the left wing scrapped the runway surface. Full left rudder and right aileron were applied to counteract the yawing motion. With the throttle at idle and the aircraft continuing to slow, the aircraft departed the right side of the runway at a 45 degree angle.

The right main landing gear impacted temporary above ground sprinkler lines, causing the gear leg to buckle rearward and the aircraft came to a rest in the grass (approx 2000 feet from the runway threshold, on the west side of 18L) on its left main landing gear and right wingtip. The engine stopped as the propeller came in contact with the grass.

A call to Denton Tower was made, requesting assistance. The aircraft was powered down normally, the canopy was unlocked and slid back, and was exited via the left wing as normal. There were no injuries.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Performing the crosswind landing with partial flaps and a 5-8 knot higher airspeed. Applying a burst of throttle to increase the airflow over the left rudder. Applying greater asymmetric braking action.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
