☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

from pictures, damage to aircraft is right wing and landing gear, stab, rt side, entry step, belly damage assumed?

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

We were established in cruise on the return leg of a cross-country training flight at 9,000 feet MSL. It was perfectly smooth and all indications, noises and such were normal. We had recently taken a handoff from Minneapolis Center to Chicago Center. We received a reroute from Chicago and as the student pilot was entering it into the GPS, I detected an odor. I asked the other pilot if they smelled something, and they responded that they did. I had them retain control of the aircraft as I set about diagnosing the odor source. I checked circuit breakers, none were popped. I scanned the panel, and all gauges were normal and as they had been since departing. I was adjusting the heat control down thinking maybe something was getting too much heat and the odor diminished. As I was readjusting the heat control ATC asked what our flight conditions were. I responded that we were smooth and as I was doing so, I looked up to an opaque windscreen. Immediately I thought icing and informed the controller that we were picking up ice and asked for lower. I turned my head out to the right to see what was above or below us causing this icing and saw clear to the ground below and nothing above. This did not correspond with my assumption of icing so I grabbed the flashlight again and as I illuminated the windscreen, I saw what can best be described as a brown river completely obscuring forward visibility to zero. I looked at the oil pressure gauge that a moment ago was normal and saw little to no oil pressure. I took control of the aircraft from my student, declared the emergency with ATC and asked for vectors to the nearest airport. As I turned toward the airport, I asked the student if they had a clear view out front and they responded with not really. I leveraged the GPS nearest function and got us pointed there. Being unfamiliar with the airport I asked the controller for the runway layout or configuration and they stated that we were almost lined up for runway 7. I keyed the lights on the CTAF to full bright and the student had visual with it while I was barely able to make it out. We had been losing engine power from shortly after we began our emergency descent to the field. I was able to catch a glimpse of the airport out of the only unaffected area of the lower rear corner of the right windshield and set up for a tight pattern in the attempt to stay within the lateral confines of the airport property. I lowered the gear on what would be an abbreviated downwind and as I did, I believe the engine finally stopped rotating. We were now dead stick and as the propeller had stopped the left windscreen was fully covered in engine oil. I tasked the student with giving me altitude and airspeed calls, specifically I wanted to know if I was below 90 MPH. Full flaps were extended on what I thought to be base turn to final. On what I thought was final, the distortion of the lights through the oil was disorienting so I aimed for the largest cluster of white runway lights and set up for a slightly nose high attitude. I was unable to adequately determine my height above the runway and as the stall horn began to sound I left the nose attitude what I perceived to be slightly high and we rejoined the earth maybe two seconds after stall horn activation. We hit hard and bounced. As we reached what I thought to be the apex of the bounce, I increased back pressure on the yoke slightly more. We hit again. Here is where it gets fuzzy for me, I am not sure with certainty that we bounced a third time of not however I feel like we did and I increased back pressure slightly again. Somewhere around the second bounce I am guessing the right main landing gear failed as we then heard all the god awful noises an airplane makes when parts that are not meant to be contacting the ground do. I was unsure where we were when we came to rest. I did a quick check of myself and asked the other pilot if they were alright. I then opened the door as I had the other pilot secure the airplane using the parking checklist for mixture cutoff and master switches mainly. I noted that the right gear was collapsed, the left fuel tank was ruptured and thankfully there was a slope away from the airplane on that side so the fuel was spilling and running away from the aircraft minimizing risk for a post incident fire. I then called 911 for our emergency, had the other pilot contact

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

massive engine oil leak

Total Time/ Cycles On Part

3,000.0 Hours

_____ Cycles

Time Since This Part Inspected/Overhauled

351.0 Hours**FUEL & SERVICES INFORMATION**

Fuel on Board at Last Takeoff

(Convert from pounds, as necessary)

50 Gallons

Fuel Type

☒ 100 Low Lead☐ Automotive☐ Jet A☐ Jet A-1☐ Unleaded AV☐ Other, specify _____

Other Services, if any, prior to departure:

EVACUATION OF AIRCRAFTWas an emergency evacuation of the aircraft performed? ☒ Yes ☐ No

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location:

Both occupants egressed through the main door right side of the aircraft.

OTHER AIRCRAFT – COLLISION (If air or ground collision occurred, complete this section for other aircraft.)

Aircraft Registration Number

Manufacturer: _____

Damage to Other Aircraft:

☐ Destroyed☐ Minor☐ Substantial☐ None

Model: _____

Registered Owner of Other Aircraft

Pilot of Other Aircraft

Name: _____

Name: _____

City: _____

City: _____

State: _____ ZIP: _____

State: _____ ZIP: _____

Country: _____

Country: _____

ADDITIONAL INFORMATION (Additional space for answers to any question.)

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE.

I understand that the information provided may be subject to public release.
