Left wing was gashed.		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink.)</i>					
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.					
Stopped at Brenham airport to refill tanks almost full (about 22 gallons). Did usual pre-flight where no abnormal indications were shown. Mag check indicated a drop of no less than 125RPMs. Carb heat showed a drop when checked on, about 100RPM. Auxiliary fuel pump was turned on for departure. No abnormal engine indications were shown prior to taking the runway or during roll. Carb heat was left off and fuel tank selector was on the left tank. Normal climb was initiated with no abnormal indication. About 500 feet above the departure end of the runway, the engine lost power. Though it didn't lose complete power, it was performing as if it was idle. I pointed towards a field slightly to the right of the departure track from runway 34. I pulled carb heat towards me about 300 feet from the ground. We landed first in front of a ditch and then bounced and landed again on the furthest rising part of the ditch and the nosewheel collapsed. The left wing dipped after bouncing the first time. I turned all the electrical and fuel related switches off and exited the aircraft along with my passenger.
