☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Bent propeller, crushed nosecone, broken windshield, RH wingtip creased, LH wing strut bent, top of vertical stabilator crushed.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On November 30, 2024, after reviewing the weather and briefing our instructional flight, the student and I performed a walk around of N2933N, a Cessna 140 based at KLVJ airport. The lesson plan included normal procedures: Walk around, start, taxi, run-up, normal takeoff, crosswind, techniques, crabbing, cross controlling, traffic pattern, normal landings and crosswind landings, shut down and use of checklist. The student occupied the left seat and myself the right seat.

We taxied the aircraft to the fuel pumps and fueled the aircraft.

Taxied to the runway, performed a run up then took off. Stayed in the pattern. Performed five low approaches over the runway.

During the last pattern, we briefed the landing. Performed a normal pattern and flared into a three point attitudes with a left crosswind. Once the aircraft touched down and all three tires were on the ground, on the centerline, the aircraft veered to the left. I stepped on the right rudder to correct but the aircraft continues to veer further left rapidly. I then applied gently the right brake while keeping the yoke full aft (Which was already in the full aft position).

The tail lifted up slowly off the ground, on it's nose and very slowly on it' back. We performed the shut down checklist and evacuation.

The NTSB was contacted and with their approval, and help from others, the aircraft was flipped to the upright position and towed to it's hangar.

The student and I debriefed and met with the authorities.

Philippe Barker

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Instructor should have spent more time discussing and practicing the use (Or not) of brakes in a tail dragger. Brakes should not applied abruptly.

Directional corrections should be accomplished with rudder.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)**Was there Mechanical Malfunction/Failure?** ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
