

December 6, 2024

John Welch

[REDACTED]

On November 30, 2024 at approximately 3:00pm. I was receiving instruction in N2933N, a Cessna 140, S/N 12753. After landing on runway 14 at Pearland Regional Airport, during the rollout, the airplane veered to the left of the runway. I was inputting right rudder but the airplane was still veering left. The instructor took control of the airplane and I believe I moved my hands and feet away from the controls but I cannot swear to that. The instructor was able to stop the veering to the left but the airplane nosed over onto its back between the centerline and the left side of the runway. There were no injuries to myself or the instructor but the airplane was damaged.
