Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Bent Nose Wheel strut and fork.

Small dent on outboard right wing nose skin and leading edge slat.

No damage to other property`

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I departed from C73. Dixon Municipal Airport. around 10:00 am CDT heading to 1C8, Cottonwood Airport, Rockford, IL. on January 15, 2025. It was a clear but cold VFR day with 10 mile plus visibility and winds were 240 degrees at 10. The temperature was about 12 degrees Fahrenheit. I was flying by myself. There were no issues with the aircraft and I was flying at 1800 ft. MSL. Everything was good, but about 25 minutes into the flight, I looked down and saw my heavy key chain was pulling the ignition key out of position in the ignition switch. It was not causing an issue, but I reached down with my thick glove covered hand, due to the cold, thinking I would just push it back into position. Instead, I bumped it sideways and turned off the ignition. The key ignition in the accessory position provides electricity to the engine ECU and the high pressure fuel pump supplying fuel to the engine injectors so the engine stopped. I tried to repositioning the key and turned it to power the ECU, fuel pump, and activate the starter. I must not have had the key positioned properly and when I turned the key it broke off in the ignition switch without turning on the ECU and fuel pump on or engaging the starter. At that point I had no alternative but to put the airplane down in a field. I picked out a bean field with little trash and the rows running north south so I could land mostly into the wind. It wasn't until I was close to the ground on the final approach that I realize there was such an uphill grade at the location I intended to set down. The top of the hill was just beyond my targeted touch down point. I tried to hold the nose up to prevent the nose gear from hitting hard but did not have enough airspeed to reach the top of the hill. I bent the nose strut and fork and in doing so, the right wing touch the ground and dented the right front wing tip. The propeller had stopped turning and ended in the horizontal position so there was no prop strike or damage to the prop or engine. The ELT went off but since it only broadcasts on 121.5, and there was no need for emergency assistance, I shut it off. I sustained no injuries. I shut all the electronic and fuel off and was walking to the house that was about 800' to the north, when the farmer who was out in the neighboring field to the east feeding cattle met me with his tractor. He gave me the name and phone number of the farmer who rents the land. The farmer gave me a ride in his tractor to his machine shop where I could wait for my wife to pick me up. I called the tenant and informed him of what happened. The tenant in turn called the property owner who then called me. He obviously wanted the plane out of his field, which I indicated I hoped to be able to remove the wings and trailer it out in the next few days. I had committed to pick up my 7 year old Grandson from school and watch him so I went home with the intend to come back the next morning to begin prepping the plane for removal. Since there were no injuries or damage to other property, I did not report the incident to the authorities. Apparently around 3:30 pm a passerby saw the plane and reported it. The Ogle County Sherriff called me to find out what happened. They indicated the State police would be out there to write up a report. I drove back up to meet them and talked to them and the FAA and NTSB over the phone. I was instructed not to touch the plane until I was given the okay. The FAA sent a person out the next morning and I received the okay to begin the prepping for removal around noon the next day.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

I intend to separate the aircraft key from all other keys on my key chain so there is no weight on the ignition key. The wiring of the ECU, fuel pumps and starter were wired as described in the ULPower installation manual in 2012. In the current installation manual, they still show this wiring method but have added a couple other wiring methods. I intend to rewire it with the functions separated out individually as described in the current manual. The UCU will be turned on with a toggle switch as well as each of the two high pressure fuel pumps will be on separate toggle switches. The key ignition switch will only engage the starter.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
