Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

The aircraft is damaged substantially. It has not been determined if it can be rebuilt.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I took off on a maintenance check flight at 1345C from KBKD in my 1979 Cessna 180K s/n 18053054 N597JC to evaluate the functionality of the new avionics equipment that was recently installed. The weather was clear and the winds were 170/18G25. The aircraft had 44 gallons of fuel in it at departure. I had the avionics technician that did the installation in the right seat with a checklist of functions that we intended to complete. We took off on runway 17 and exited the pattern on a left downwind departure to the north and climbed to 3500' MSL. After approximately 15 minutes of flight, we turned southwest to intercept the RNAV(GPS) RWY 17, descended to 2800' MSL, and I completed my landing checklist. At glideslope intercept, I retarded the throttle to idle and let the aircraft decelerate as we continued on the approach. I noticed the aircraft was not decelerating as I would expect so I increased the prop RPM to create more drag and slow to final approach speed. I extended 20 degrees of flaps and reached my target airspeed. I noticed the manifold pressure at 11" inches which seemed high. The engine was running smoothly however. At about 800' AGL, I increased the power to initiate the missed approach. The engine did not respond to my power increase. I switched from Both to either Right or Left on the fuel selector(don't remember), cycled the throttle, and checked that the carb heat was on which it was. The engine did not respond. I selected the most suitable landing surface as I could not make the airfield. The aircraft came to rest in a mesquite field upside down. I switched the fuel selector to OFF and turned the master switch to OFF. We released our seatbelts and egressed the aircraft.
