

NATIONAL TRANSPORTATION SAFETY BOARD • PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT Use this form (Form 6120.1) to report civil and public aircraft accidents and incidents

BASIC INFORMATION
Accident/Incident Location

 Nearest City/Place: Farlinville State: KS

 ZIP: 66014 Country: US

 Latitude: 38.253473 Longitude: -94.790030

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

 Date: 02/27/2025 Local Time: 11:30
mm/dd/yyyy HH:MM

 Time Zone: CST

 Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

 Registration Number: N30413

 Manufacturer: Cessna

 Model: 177A

 Serial Number: 17701240

 Year of Manufacture: 1,969

 Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Original Design ☐ Kit/Plans

Make: _____

- ☐
- IFR-Equipped and Certified
-
- ☐
- Commercial Space Flight
-
- ☐
- Unmanned Aircraft

 Maximum Gross Weight: 2,500 lbs.

 Weight at Time of Accident/Incident: 2,200 lbs.

 Number of Seats: 2 Flight Crew Seats: 2

 Cabin Crew Seats: 0 Passenger Seats: 0

 Number of Engines: 1

DAMAGE TO AIRCRAFT AND OTHER PROPERTY					
Aircraft Damage ☐ None ☐ Substantial ☐ Minor ☐ Destroyed ☒ Unknown	Aircraft Fire ☒ None ☐ Both Ground and In-Flight ☐ In-Flight ☐ Fire at Unknown Time ☐ On-Ground ☐ Unknown	Aircraft Explosion ☒ None ☐ Both Ground and In-Flight ☐ In-Flight ☐ Fire at Unknown Time ☐ On-Ground ☐ Unknown			
Description of Damage to Aircraft and Other Property <i>(Use additional sheet, if necessary.)</i> Impact on lower front end					
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink.)</i>					
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible. On the morning of the incident the aircraft was removed from inside a community hangar at KXNA, Northwest Arkansas Regional at the Regional Jet Center FBO, where it had been inside for an unknown period of time (a few hours). The inside temperature of the hangar was unknown. The aircraft was fueled on the ramp by a full-service crew after delays due to faulty equipment on the fuel truck. As the fuel was added, isopropyl alcohol was also added as outlined in our company SOP due to the cold outside air temperatures and the aircraft had sat a period of time outside. I performed a preflight walk around, started the aircraft, and let the aircraft engine warm up. After conducting an engine run-up, the aircraft departed to fly to the first pipeline patrol location. A pipeline patrol was then conducted. Upon completion of that patrol line, the aircraft was turned towards the start point of the second pipeline patrol. During this time it was noted the right fuel tank was slightly higher in fuel readout than the left, and so the fuel selector was moved to the right tank only. Close to the start of the second pipeline patrol line, the elapsed time since departing the airport was approximately 1.5 hours, and approximately 1.8 hours since the engine had started. At this time the engine changed its performance condition from running completely normally, to without any warning, lowering RPM to idle for several seconds, then raising RPM to max power for a few seconds, and repeating the cycle. This could also be described as engine power surging. I immediately checked the fuel pressure which read close to zero. I turned on the electric fuel boost pump, but this had no effect on the fuel pressure gauge readout, nor did it change the response of the engine. I determined the closest airport (1KS) was to the East Southeast and began heading in that direction considering the engine was still operating on partial power. The fuel selector valve was changed back to both, and when no change in engine performance was observed after a period of time, the selector was changed to left, but the engine performance did not improve. The selector was ultimately moved back to both. Carb heat was turned on for a period of time and also cycled without any change. The mixture control was modified to attempt any change. Throttle settings were also changed to elicit a positive response of any kind. The primer was noted as secured. None of the remedial steps improved the engines condition, which after a few minutes, finally began to degrade more. A determination was made that a forced off-airport landing would be necessary. Unfortunately, due to flying towards the airport, the aircraft was now positioned over an even more remote area with less roads. The terrain was completely covered in snow, shrouding all terrain features beneath the snow, to include subtle changes in elevation (the snow masked shadows), vegetation, surface condition, etc. A road was identified and a recon pass was made over the road to determine if it was a suitable landing site. On the West side of the road existed trees fairly close. To the East side of the road were power lines. I could not determine how far away the power lines were from the road due to the snow covering portions of the road, and the scale of the power lines from the observation altitude. A decision was made to "Do the right thing and pick the safer option", which would be an open field. By this time more altitude had been lost and in order to set up for an up-wind landing, the aircraft needed to fly further to the SE and then turn generally North into the wind. After leveling the wings, the aircraft touched down in what turned out to be a surface frozen over pond. +					
OPERATOR/OWNER SAFETY RECOMMENDATION <i>(How could this accident/incident have been prevented?)</i>					
I have been advised by the NTSB, that the percentage label on Isopropyl Alcohol is not an octane type concentration such as auto fuel, which was my understanding. Evidently there is filler in Isopropyl Alcohol, which is water. I was not aware of this, as I would never deliberately contaminate the aircraft's fuel, especially as the pilot of said aircraft. When adding Isopropyl Alcohol, I was informed by the NTSB representative that I inadvertently added water when I used 70% Isopropyl Alcohol instead of adding a higher percentage of Isopropyl Alcohol. An important note; On WalMart brand "Equate" 70% Isopropyl Alcohol, the only instance water is mentioned anywhere on the product is at the bottom of the rear label in fine print, in which it states that "purified water" is an "inactive ingredient". The label does not specify any amount. Even on some higher percentage labels of Isopropyl Alcohol, the same inactive ingredient is present on the label without any mention to the amount. With this new information, the first recommendation to mitigate an incident such as this again; Do not add Isopropyl Alcohol to the fuel which contains a detrimental amount of water, whatever percentage that may be. The reason Isopropyl Alcohol was added to the fuel in the first place, was in following company standard operating procedures for cold weather environments. Unfortunately the company SOP did not specify what percentage, nor brand, nor specified exact authorized items (part number or UPC) of Isopropyl Alcohol to use. Instead, the SOP states "Use isopropyl alcohol when temperatures are 10 degrees F or colder," which was the case as observed by the in-cockpit temperature gauge the morning of the incident after the aircraft had sat for a portion of the night in very cold temperatures. Therefore I added the Isopropyl Alcohol in good faith that I was following the company SOP. +					

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Engine Failure (information above on form)

Total Time/ Cycles On Part

_____ Hours

_____ Cycles

Time Since This Part Inspected/Overhauled

_____ Hours
