NOTAMS (D and FDC), AIRMETS, SIGMETs, PIREPs in effect at the time of the accident/incident:

DAMAGE TO AIRCRAFT AND OTHER PROPERTY**Aircraft Damage**

- ☐ None ☐ Substantial
☒ Minor ☐ Destroyed
 ☐ Unknown

Aircraft Fire

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

The right main landing gear was knocked off the fuselage after it hit a runway sign. The right wing end cap came off after it hit the ground. The propeller tips bent after it struck the ground. The tail proximal to the vertical stabilizer fissured.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The accident happened during a landing at the same airport that I took off from. Not having flown for 4 months I intended to practice at the same airfield 3-4 landings. My first landing of the day was complicated by a right quartering wind that pushed me off the runway to the left as I approached. Since the runway was narrower than I am used to, I forced the descent and hit the tail too hard that caused a fissure. This crack prevented me from using the elevators to pitch the nose up, and I lost lift despite putting full power to attempt a go around. The right main wheel then hit a runway sign and broke off the fuselage. I set the plane down by withdrawing power and used the ailerons to steer the plane on the runway. It skidded and ground looped to the right onto a clear dirt space as it slowed to a full stop.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Firstly, by not having been in the plane for several months I should have decided to practice running the plane on the ground near take off speed on the 2 main wheels. Then I should have practiced running the plane sub take off speeds on each of the main wheels separately. The tail wheel plane is challenging enough to control on the ground at high speeds without needing to take off. Practicing on the ground would have returned to me a lot of the feel of the aircraft without having to actually take off, which would have given me more time to get comfortable with the all of the controls in the cockpit again.

Secondly, I should have practiced earlier in the morning at 8 am before the winds of the afternoon picked up. This would have allowed me to focus on the sequence of steps needed to land the plane without having to deal with added complication of a quartering wind. I would have been more alert in morning instead of in the afternoon after a longer wait.

Thirdly, I should have realized that being out of practice was an opportunity to get coaching from an experienced pilot or instructor in my plane. Having a co-pilot would have taken more stress off and allowed me to perform the needed adjustments and corrections for the landing procedure that had some more complications than I was used to, for example the wind factor and the narrower runway.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
