☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Propeller blade broke on takeoff. Subsequent vibration caused damage to engine mounts. Significant oil leak, source unknown. Wheel pants damaged on landing on the tall grass. Damage to engine itself unknown

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

We recently moved to Cookson, OK from Carson City, NV. I was in the process of moving my plane to Cookson. Took off from KLRU the morning of 3/10 enroute to 44M, my final destination. Stopped at KPVW to refuel and relax for a few minutes. Up until that point the flight was uneventful. After refueling and relaxing for a little bit I did visual inspection of the plane and got back for the final leg of my flight.

Checked the AWOS and did my run up. Selected runway 22 based on wind direction. Takeoff was smooth and once I reached about 800 AGL, I made my call to turn left cross wind for departure to the east. Right at the point there was a lot of shuddering that suddenly shook the plane. My initial reaction was engine failure. Propeller failure never occurred. Made MAYDAY call to the airport. Pulled back the throttle and shaking slowed down by a lot. It was still vibrating but not as bad. Straightened the plane, cut the power and made decision to find a landing spot. Based on my elevation, decided it was not a good idea to turn around back to the airport.

There were two options. One field had a bunch of buildings and the field right next to it looked unoccupied from the air.

Made my decision to land in that field. Luckily the field was flat with tall grass. Was able to land safely, stop in good time and stepped out of the plane and called the manager of the airport to report what happened and notified that I had not sustained any injuries.

Manager of the airport, Mr. [REDACTED] was able to locate me fairly quickly. We notified the owner of the field of our situation. Initial determination showed no damage to the undercarriage. Called in a tow truck with a roll down bed and were able to load up the plane and bring back to the airport. It is parked in the hangar belonging to the local airplane mechanic.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

This was a brand new propelled with less than 50 hours on it. How am I supposed to know the blade was going to break off like this?

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Three blade electric constant speed prop was installed in Dec 2023. One of the blades broke off on take off.
