NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Pilot Narrative Statement – NTSB Report

Date of Accident: March 22, 2025 (Saturday)

Location: Russellville Regional Airport (KRUE)

Pilot: Corey Bauer- Private Pilot

Aircraft: Taylorcraft BC-12D N39158

Pre-Flight and Departure

On the morning of March 22, 2025, I departed Russellville Regional Airport (KRUE) along with two other local pilots for a local flight to a nearby airstrip for breakfast. Departed at KRUE 0830 CST arriving to 51AR at 0915 CST. The outbound flight was uneventful and conducted under VFR.

Return Flight to KRUE

That morning, we departed the breakfast airstrip 51AR at 1030 CST to return to KRUE. I was the third aircraft in the group to return. Weather conditions were VFR with winds from the south, generally favoring Runway 07.

Upon initial contact with CTAF at KRUE, we were made aware that three Army helicopters were parked on Taxiway Alpha, a parallel taxiway to Runway 07, preparing for departure. The helicopters were positioned facing east and had their engines running. They were approximately abeam the 1,000-foot markers of Runway 07.

Arrival and Traffic Situation

The first two pilots in our group entered the traffic pattern and landed uneventfully on Runway 07. Radio traffic from the helicopter pilots indicated that they planned to taxi to Runway 25 for departure.

As I was on short final for Runway 07, the lead helicopter unexpectedly added power and began taking off to the east directly from Taxiway Alpha, despite previous radio calls indicating they would wait for all fixed-wing arrivals to land. At this point, I became concerned about both airspace and runway conflicts. A go-around would have placed me in close proximity to the helicopters, raising concerns about wake turbulence and separation. Committing to land, however, also raised concerns about rotor wash on the runway.

The helicopter's departure was unexpected and distracting, which disrupted my final approach.

Accident Sequence

I elected to continue the landing on Runway 07. Upon a 3 pt touchdown for a full stop, I encountered gusty wind conditions and experienced difficulty maintaining directional control of the aircraft. During my attempt to regain control, the aircraft departed the runway surface. It came to a sudden stop, which caused the aircraft to pitch up onto its nose and eventually come to rest inverted.

As a result of the accident, the aircraft sustained substantial damage, including to the propeller, wing strut, and other structural components. I was wearing a seatbelt and shoulder harness and did not sustain any injuries. I was able to exit the aircraft safely without assistance.

Later, I was informed that the first pilot who had landed and taxied to parking also experienced an aircraft upset due to the unexpected rotor wash as the helicopters took off, nearly resulting in a second incident. One of the Military helicopters radioed to --page down--

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)**Recommendations**

In reflecting on the events that led to this accident, I believe the unexpected departure of the Army helicopters from the parallel taxiway while I was on final approach was a significant contributing factor. While the helicopter pilots had previously indicated they would wait until all fixed-wing aircraft had landed, their decision to depart early introduced a sudden and unanticipated hazard during a critical phase of flight.

Better communication may have helped prevent this accident. Specifically, I could have made an additional radio call at approximately one mile final to confirm the helicopters' intentions and ensure they would remain clear until I was on the ground. Had there been any uncertainty, a prudent course of action would have been to exit the traffic pattern and re-enter after the helicopters had departed. Increased coordination and clarity on the CTAF—especially when both rotary- and fixed-wing operations are occurring in close proximity—are essential. Confirming mutual intentions and maintaining predictable traffic flows can help prevent confusion and reduce the risk of incidents like this in the future.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Total Time/ Cycles On Part

_____ Hours

ADDITIONAL INFORMATION (Additional space for answers to any question.)

---continued from Narrative History of Flight---

one of the other helicopter pilots while i was on final "man you roto-washed the shit out of that plane" meaning the plane that was taxiing to hanger.

Later Saturday afternoon, one of the helicopter pilots called a number at the KRUE fbo to check on the plane that was roto-washed. The phone line was listed to Seth Lake in which at the time knew nothing about the incidents/accident.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE.

I understand that the information provided may be subject to public release.
